

OPEN_WS

This macro command opens a specified window screen and waits for the closing of the specified window screen.

[Example]

OPEN_WS(300)

OPEN_WS(\$U1234)

Notes:

- 1) The specified screen must be a window screen.
- 2) The specified screen must not be opened yet.
- 3) This command stops the execution of the macro program. The macro program will be resumed after the specified window screen is closed.

CLOSE_WS

This macro command can only be used in a CYCLE macro of a window screen. It terminates the cycle macro and closes the window screen.

[Example]

CLOSE_WS
