

You can select a language to display by storing the language number minus 1 in \$S317. For example, to display language 3, store 2 in \$S317.

The HMI is able to display the last selected language for the application after power on if the following conditions exist.

-
- The image displays two screenshots of the PM Panel Setup interface.
- Top Screenshot: Panel Setup Menu**
- The main title is "Panel Setup". Below it, there are three menu options: "General", "Touch Panel", and "Real Time Clock". The "General" option is highlighted with a red rectangular border.
- At the bottom left, it says "PM Version:".
- Bottom Screenshot: General Settings Screen**
- The title of this screen is "General". It contains several settings:
- Check Battery:** Enabled
 - Screen Saver Time (minutes):** 20
 - Enter Panel Setup Mode:** Enabled
 - Communications Settings:** Default
 - Start-up Language:** Default
- To the right of these settings are four buttons: an up arrow (↑), a plus sign (+), a down arrow (↓), and a minus sign (-).
- Below these settings is a section for **LCD Brightness**. It includes three buttons: "Increase", "Decrease", and "Save".
- At the bottom right, there are two large buttons: "OK" and "Cancel".
