[Abstract]

How to Make External and Internal Graphic output Working at the same time.

[Solution]

1. In my test, UNO-3085G-D44E(BIOS V113, Win7 32bit) + nvidia GT610. Both internal and external display can work. But only have extended desktop mode.
2. BIOS need to change setting Primary Display need to change from **Auto** to **IGFX**. And GT610's graphic driver need to be installed before the test.
