Abstract	Control the camera by "set feature" in Inspector PRO		
Keyword	Inspector PRO, set feature, control		
Related Product	Inspector PRO		

■ **Problem Description:**

The customer unwilling to alter parameter of camera from camera's viewer, how can he control the camera in Inspector PRO?

■ **Brief Solution - Step by Step:**

Please notify that these functions do not work when using Ifc driver to connect 3rd party camera, but we will revise the function continuously.

1. In "Program", click "IO:camera" and click "set number feature".

Picture1: set number feature

2. Open camera's viewer or user manual to find "node name" of the parameter you want to set.

**Picture2:** node name of the parameter

3. Set camera index. The "feature" is parameter's node name and the value is the same with you set

in camera's viewer. However, if the parameter is not a number but a string options, you can use "set string feature" to alter the parameter.
