Product Warranty (2 years)

Advantech warrants the original purchaser that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products that have been repaired or altered by persons other than repair personnel authorized by Advantech, or products that have been subject to misuse, abuse, accident, or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced free of charge during the warranty period. For out-of-warranty repairs, customers will be billed according to the cost of replacement materials, service time, and freight. Please consult your dealer for more details.

If you believe your product to be defective, follow the steps outlined below.

- Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages displayed when the problem occurs.
- 2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
- If your product is diagnosed as defective, obtain a return merchandise authorization (RMA) number from your dealer. This allows us to process your return more quickly.
- 4. Carefully pack the defective product, a completed Repair and Replacement Order Card, and a proof of purchase date (such as a photocopy of your sales receipt) into a shippable container. Products returned without a proof of purchase date are not eligible for warranty service.
- 5. Write the RMA number clearly on the outside of the package and ship the package prepaid to your dealer.

Part No. 2001815I02

Edition 3 April 2022

A Message to the Customer

Advantech Customer Services

Each and every Advantech product is built to the most exacting specifications to ensure reliable performance in the harsh and demanding conditions typical of industrial environments. Whether your new Advantech equipment is destined for the laboratory or the factory floor, you can be assured that your product will provide the reliability and ease of operation for which the name Advantech has come to be known. Your satisfaction is our primary concern. Here is a guide to Advantech's customer services. To ensure you get the full benefit of our services, please follow the instructions below carefully.

Technical Support

We want you to get the maximum performance from your products. So if you run into technical difficulties, we are here to help. For the most frequently asked questions, you can easily find answers in your product documentation. These answers are normally a lot more detailed than the ones we can give over the phone.

So please consult this manual first. If you still cannot find the answer, gather all the information or questions that apply to your problem, and with the product close at hand, call your dealer. Our dealers are well trained and ready to give you the support you need to get the most from your Advantech products. In fact, most problems reported are minor and are easily solved over the phone.

In addition, free technical support is available from Advantech engineers every business day. We are always ready to give advice on application requirements or specific information on the installation and operation of any of our products.

Declaration of Conformity

FCC Class B

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for assistance.

Initial Inspection

Before installing motherboard, please make sure that the following materials have been shipped:

- 1 x ASMB-815 ATX motherboard
- 1 x ASMB-815 Startup Manual
- 1 x Driver CD
- 2 x Serial ATA HDD data cables
- 1 x I/O port bracket
- 1 x CPU power cable (8P)
- 2 x SATA power cable
- 1 x Warranty card

If any of these items are missing or damaged, contact distributor or sales representative immediately. We have carefully inspected the ASMB-815 mechanically and electrically before shipment. It should be free of marks and scratches and in perfect working order upon receipt. When unpacking the ASMB-815, check it for signs of shipping damage. (For example, damaged box, scratches, dents, etc.) If it is damaged or it fails to meet the specifications, notify our service department or local sales representative immediately. Also notify the carrier. Retain the shipping carton and packing material for inspection by the carrier. After inspection, we will make arrangements to repair or replace the unit.

Chapter

Overview

1.1 Introduction

The ASMB-815 serverboard is the most advanced Intel Xeon Processor scalable family series board for server-grade IPC applications that require high-performance computing power & multi-expansion slots. This serverboard supports Intel Xeon Scalable series processor and DDR4 ECC-REG 2133/2400/2666/2933 MHz memory up to 768 GB.

ASMB-815 provides five PCIe x8 or two PCIe x16 and one PCIe x8, one PCIe x4 and one PCIe x1 Gen3.0 high speed. In addition, the full ASMB-815 SKU has dual Gigabit and dual 10GbE Ethernet LAN ports that eliminate network bottlenecks. (ASMB-815 I & T2 SKUs only)

The fifth RJ-45 LAN connector (LAN5) is dedicated for IPMI function that allows remote control management. One RJ-45 LAN jack (LAN3) from 10GbE port can also be used as IPMI LAN. High reliability and outstanding performance makes ASMB-815 the ideal platform for industrial server/networking applications.

By using the Intel C621/C622 chipset, the ASMB-815 offers a variety of features such as 6 x USB3.0 and 7 x USB 2.0 connectivity, 8 x onboard SATA III, and 1 x M.2 (SATA and PCIe) interface. It supports software RAID 0, 1, 10 and 5 (Windows only*), and with the latest Intel RSTe (Rapid Storage Technology Enterprise) it provides a compelling RAID solution for NVMe SSDs via Intel VROC (Virtual RAID on CPU) HW key.

These powerful I/O capabilities ensure even more reliable data storage capabilities and high-speed I/O peripheral connectivity.

Note!

- IPMI module will be included in ASMB-815I and ASMB-815T2 SKUs. Only ASMB-815T2 SKU can support 10GbE LAN ports.
- 2. Please refer to Ordering Information at the front for chipset, IPMI, and LAN support on individual product SKUs.
- 3. Please refer to the release note of each Linux OS for Intel's C621/C622 chipset SATA RAID function support.

1.2 Features

General

- Intel Xeon Processor Scalable Family support: ASMB-815 is equipped with single CPU socket to support Intel Xeon Platinum/Gold/Silver/Bronze series up to 28-core processors.
- High performance I/O capability: 2 x 10GbE + 2 x GbE LAN, 2 PCle x16 slot (x8 or x16 link) +3 PCle x8 slot (x8 link) +1 PCle x4 (x4 link) + 1 PCle x1 (x1 link), 8 x SATA and 1 x M.2 connector, 6 x USB 3.0 and 7 x USB 2.0 (incl. 1 x Type-A) ports.
- Standard ATX form factor with industrial features: ASMB-815 provides industrial features like long product life cycle, reliable operation under wide temperature range, watchdog timer, etc.
- IPMI 2.0 support: ASMB-815 (T2 and I SKUs) equipped with ASPEED 2500 BMC chip supports IPMI 2.0 (Intelligent Platform Management Interface 2.0) via dedicated LAN port.
- **KVM over IP:** KVM over IP function allows BIOS level remote control of ASMB-815 (T2 and I SKUs) through your own computer.

1.3 Specifications

Dual Intel LGA3647 Xeon processor sockets Supports Intel 1st and 2nd Gen Xeon Scalable family, up to 28 cores Supports the TDP of processor up to 205 W System Memory Memory Capacity DDR4 memory bus 6 memory slots Up to 768GB of memory One DIMM per channel Supports DDR4 2133/2400/2666/2933 MHz RDIMM/LRDIMM modules Each memory slot supports 4GB, 8GB, 16GB, 32GB, 64GB, 128GB memory modules Memory Voltage 1.2 V Error Detection Corrects single-bit errors Detects double-bit errors (using ECC memory) On-Board Devices Chipsets Intel C621/C622 PCH 2 x Intel X557 10GbE and 2 x Intel I210 Gigabit Ethernet Controller connected to PCH (ASMB-8151 & T2 SKUs) Above network supports 10 GbE Base-T and 10/100/1000 Base-T, with RJ-45 output VGA ASPEED AST2500/2510 controller with 64 MB VGA memory provides basic 2D VGA function. ITE IT8528E chip provide motherboard keyboard mouse, RS-232, and hardware monitor functions One Realtek 8201EL Gigabit PHY connected to AST2500 for BMC remote management Input/Output Storage Total 8 x SATA ports and 1 x M.2 (SATA/PCIe x4 compatible) provide 6 Gb/s and 8 Gb/s bandwidth RAID 0, 1, 5, 10 support (Windows only) 4 x RJ-45 LAN ports (2 x 10GbE + 2 x GbE LAN) 1 x RJ-45 Dedicated IPMI LAN for IPMI only, there is no regular LAN function (ASMB-815 I & T2 SKUs). 4 x USB 3.0 internal header (2 ports) 2 x USB 2.0 internal headers (4ports) 1 x internal Type-A USB 2.0 port. Keyboard/Mouse PS/2 keyboard and mouse internal header (onboard). Sarial Port/Leader/ 1 x RS232 port at rear window, 1 x internal header (2 x 5P	Table 1.1: Specifica	ition	s

Environmental Spec.	 Operating Temperature: 0 to 60° C Non-operating Temperature: -40 to 85° C Operating Relative Humidity: 10% to 90% (non-condensing) Non-operating Relative Humidity: 10% to 95% (non-condensing)

Note!

The PCIe slot 3/5 has no function when slot 4/6 is card occupied with x16 link.

1.4 Board Layout, Jumpers and Connectors

Connectors on the ASMB-815 are linked to external devices such as hard disk drives. In addition, ASMB-815 has a number of jumpers that are used to configure the system for specific applications.

The tables below list the functions of each jumper and connector. Later sections in this chapter give instructions for setting jumpers. Chapter 2 gives instructions for connecting external devices to ASMB-815.

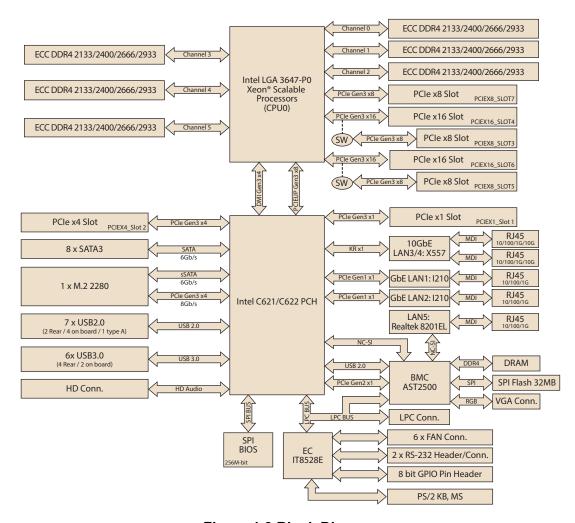

Figure 1.3 Block Diagram

1.6 System Memory

ASMB-815 has six 288-pin memory slots for DDR4 2133/2400/2666/2933 MHz memory modules with maximum capacity of 768GB (Maximum 128GB for each DIMM). ASMB-815 supports registered DIMMs memory module.

1.7 Memory Installation

Memory performance is affected by different DIMM configurations. To reach optimal memory interleaving, be sure to install identical DIMM types with the same size, speed, and number of ranks on those memory slots corresponding to the correct processor.

The following table indicates recommended DIMM configurations with a single processor, based on the guideline, you may adjust your memory configuration according to your PCIe expansion card configuration.

2nd Gen Xeon Scalable (82xx/62xx/52xx/4215) processors support Optane DC persistent memory module (DCPMM).

Table 1.6: DIMM Configurations with Single CPU							
	Quant	Quantity of memory installed					
CPU0	1	2	3	4	5	6	
DIMM A1	V	V	V	V		V	
DIMM B1		V	V	V		V	
DIMM C1			V			V	
DIMM D1				V		V	
DIMM E1				V		V	
DIMM F1						V	

Note! 5 DIMMs are not recommended DIMM population.

Table 1.7: DCPMM Population Matrix							
	Symmetric Population within CPU0						
Modes	DIMMF2	DIMME1	DIMMD1	DIMMC1	DIMMB1	DIMMA1	
AD	DCPMM	DRAM1	DRAM1	DCPMM	DRAM1	DRAM1	
MM	DCPMM	DRAM1	DRAM1	DCPMM	DRAM1	DRAM1	
AD+MM	DCPMM	DRAM3	DRAM3	DCPMM	DRAM3	DRAM3	

- AD: App Direct Mode; MM: Memory Mode; AD+MM: Mixed Mode.
- DRAM1: RDIMM, 3DS RDIMM, LRDIMM, 3DS LRDIMM
- DRAM2: RDIMM
- DRAM3: RDIMM; 3DS RDIMM; LRDIMM
- Any capacity of DCPMM is allowed

1.8 Processor Installation

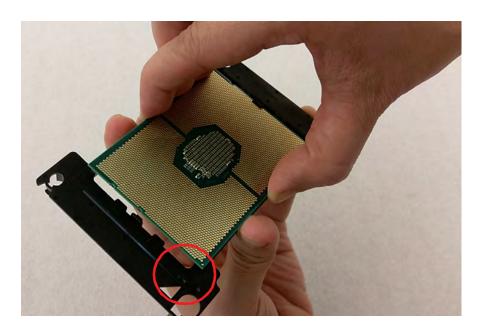

The ASMB-815 is designed for the Intel Xeon processor family.

1. Remove dust cover.

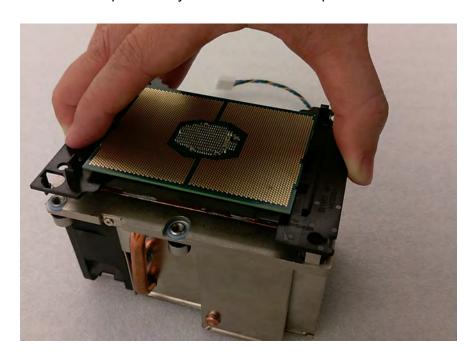

(The following pictures are referred from same platform ASMB-825 with dual processors but ASMB-815 is with single processor)

2. Install CPU on CPU clip and align the pin 1 mark.

3. Install the CPU clip assembly on the heatsink as a processor + heatsink module.

4. Place the processor heatsink module into the motherboard bolster plate by using a T-30 screw driver (follow heatsink label direction 1-2-3-4).

Connections

2.1 Introduction

You can access most of the connectors from the top of the board as it is being installed in the chassis. If you have a number of cards installed, you may need to partially remove a card to make all the connections.

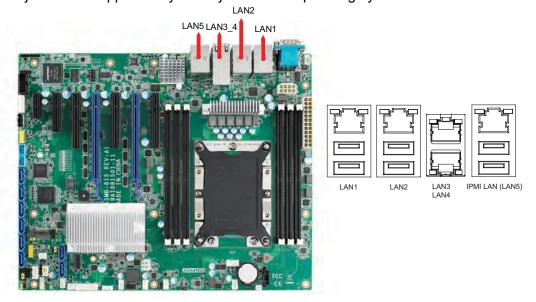

2.2 USB Ports (USB1_2, USB3_12, USB3_34, USB3_56, USB9_10, USB11, USB13_14)

The four USB 3.0 ports on the rear plate and two USB3.0 on-board ports could reach transmission rates up to 5 Gbps, besides the two USB2.0 ports on the rear and four on-board ports and one Type-A ports are with 480 Mbps speed. Fuse protection is supported and the USB interface can be disabled in the system BIOS setup.

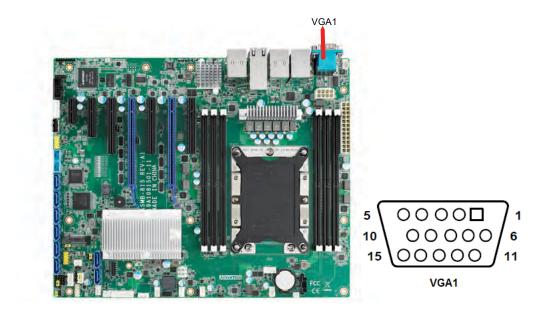

2.3 LAN Ports (LAN1~LAN5)

The ASMB-815 is equipped with two 10GbE (LAN3 and LAN4), two GbE LAN (LAN1,2) ports and one dedicated IPMI LAN (LAN5) port. One of 10 GbE LAN (LAN3) can be used as IPMI LAN as well for system management. They are all with RJ-45 jacks and supported by all major network operating systems.

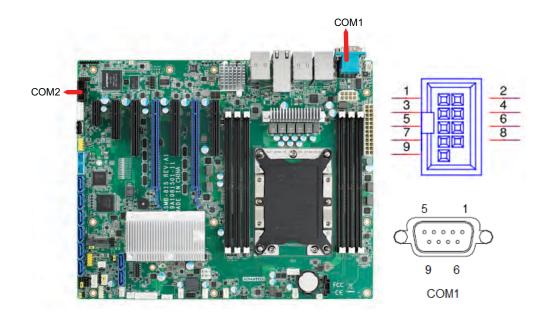

2.4 VGA Connector (VGA1)

The ASMB-815 includes a VGA interface that can drive conventional CRT and LCD displays.

2.5 Serial Ports (COM1~2)

The ASMB-815 offers one serial port on the rear plate and one 2.50mm onboard with 2×5 -pin pitch.

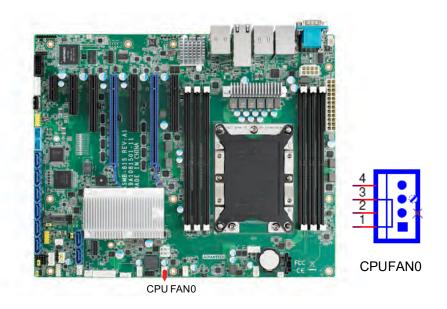

2.6 PS2 Keyboard and Mouse Connectors (KBMS2)

The 6-pin KBMS2 connector is for additional keyboard & mouse device usage.

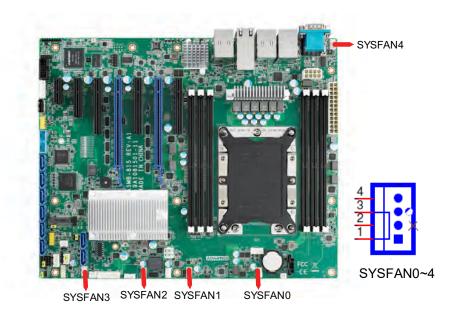

2.7 CPU Fan Connector (CPUFAN0)

If a fan is used, this connector supports cooling fans that draw up to 1.5A (18W).

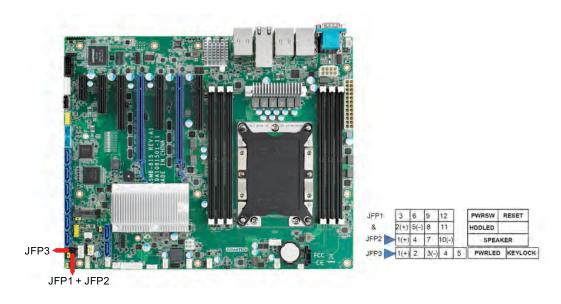

2.8 System Fan Connector (SYSFAN0~4)

2.9 Front Panel Connector (JFP1~3)

There are several external switches and LEDs to monitor and control the ASMB-815.

2.9.1 Power LED (JFP3)

JFP3 pin 1 and pin 3 are for the power LED. Refer to Appendix B for detailed information on the pin assignments. If an ATX power supply is used, the system's power LED status will be as follows.

Table 2.1: ATX Power Supply LED Status				
ACPI Power Mode	LED (ATX power)			
System On (S0)	On			
System Hibernation (S4)	Slow flashes			
System Off (S5)	Off			

2.9.2 External Speaker (JFP2 Pins 1, 4, 7, 10)

JFP2 pins 1, 4, 7, 10 connect to an external speaker. The ASMB-815 provides an onboard buzzer as an alternative. To enable the buzzer, set pins 7-10 closed.

2.9.3 HDD LED Connector (JFP2 Pins 2 & 5)

You can connect an LED to connector JFP2 to indicate when the HDD is active.

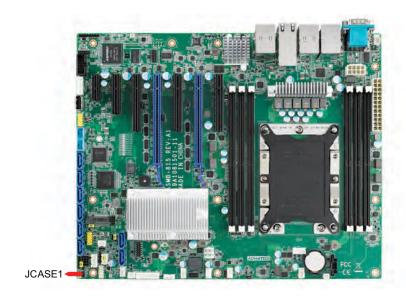

2.9.4 Reset Connector (JFP1 Pins 9 & 12)

Many computer cases offer the convenience of a reset button.

2.9.5 Case Open (JCASE1)

A chassis intrusion header is located at JCASE1 on the motherboard. Attach the appropriate cable from the chassis to be informed of a chassis intrusion when the chassis is opened. The default function is disabled and Pin 1-2 is bridged by a jumper cap.

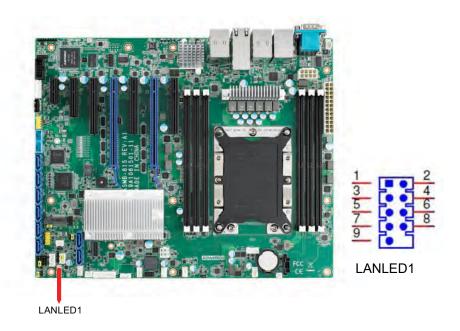

2.10 SATA SGPIO (SGPIO1)

2.11 Front Panel LAN Indicator Connector (LANLED1)

2.12 SATA and M.2 Connector (SATA0~7, M2_2280)

ASMB-815 features eight serial ATA III interfaces (up to 600 MB/s) which eases cabling to hard drives with thin and long cables. The M.2 2280 connector can support both SATA and PCIe SSD devices.

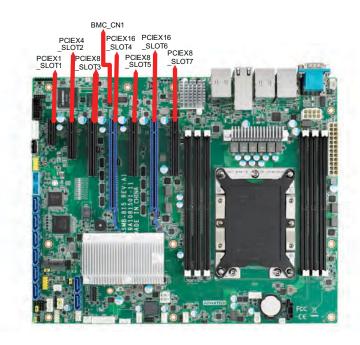

Note!

Please pay attention to one MB screw hole H4 allocated in the M.2 area. It should be unfixed when you prepare to disassemble the system.

2.13 PCIe Expansion Slots & PCIe Switch (JPRSNT1/

The ASMB-815 provides seven expansion slots. Riser card for 1U or 2U chassis can be used in slot-6 only.

	Slot Length	Link	PCI-E Generation	PCle link from
SLOT1	PCI-E x1	PCI-E x1	3	PCH
SLOT2	PCI-E x4	PCI-E x4	3	PCH
SLOT3	PCI-E x8	PCI-E x8	3	CPU
SLOT4	PCI-E x16	PCI-E x16	3	CPU
SLOT5	PCI-E x8	PCI-E x8	3	CPU
SLOT6	PCI-E x16	PCI-E x16	3	CPU
SLOT7	PCI-E x8	PCI-E x8	3	CPU

	Part Number	Description	Remarks
Riser Card	ASMB-RF388-21A1E	ASMB-RF388 (2U riser card)	2*PCI-E x8 or 1*PCI-E x8 + 2*PCI-E x4
	ASMB-RF348-21A1E	ASMB-RF348 (2U riser card)	2*PCI-E x4 + 1*PCI-E x8
	ASMB-RF3X8-21A1E	ASMB-RF3X8 (2U riser card)	1*PCI-Ex4 + 2*PCI-X
	AIMB-RF10F-01A1E	AIMB-RF10F (1U riser card)	1*PCI-E x16

Slot 7 has a dedicated PCIe x8 link. Slot 3/4 shares one x16 link from CPU0, and slot 5/6 is sharing another x16 link from CPU0.

There are JPRSNT1 or JPRSNT2 jumper to switch PCle slot 3/4 or slot 5/6 to two x8 links manually. Normally this jumper is 1-2 closed as default for auto detect. Some cards on slot 3 or slot 5 can't be recognized until JPRSNT jumper is forced to 2-3 closed.

2.14 Auxiliary Power Connector (ATXPWR1/ATX12V1)

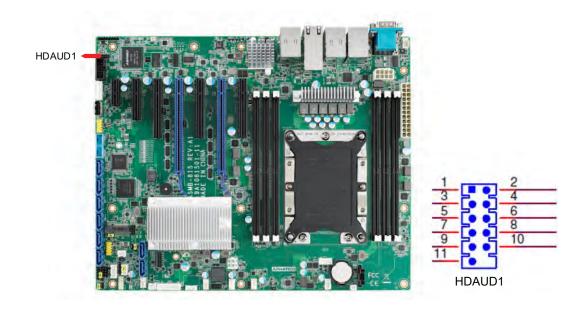

Note!

- 1. Please use a power supply which is of SSI type; minimum output should be at least 500W with 5Vsb @2.5A.
- 2. ATXPWR1 & ATX12V1 should be all connected with power supply, otherwise ASMB-815 will not boot up normally.

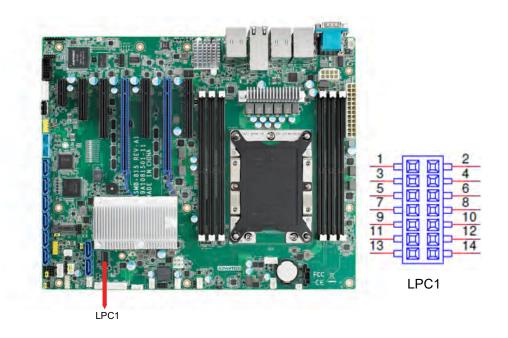

ASMB-815 has one audio connector for Advantech's audio board (P/N: PCA-AUDIO-HDB1E) installation.

2.15 HD Audio Interface Connector (HDAUD1)

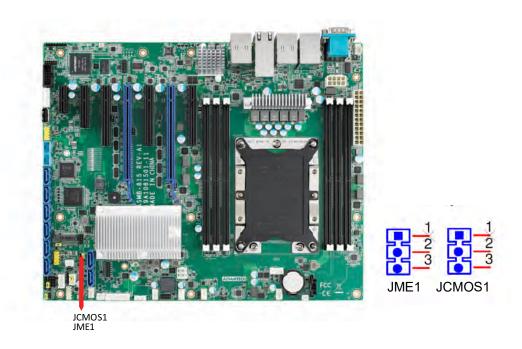

2.16 LPC Connector (LPC1)

ASMB-815 has one LPC connector that can be used for Advantech's TPM Module (P/N: PCA-TPM-00A1E, PCA-TPM-00B1E) for security management.

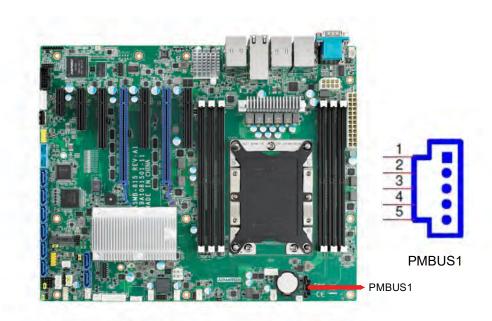

2.17 CMOS Clear and ME Update Connector (JCMOS1, JME1)

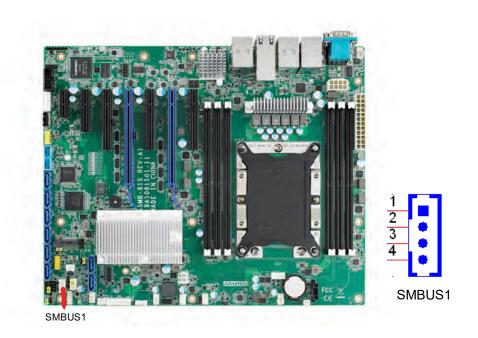

Setting jumper from pin 1-2 to pin 2-3, then back to pin 1-2 to reset CMOS data.

2.18 PMBUS Connector (PMBUS1)

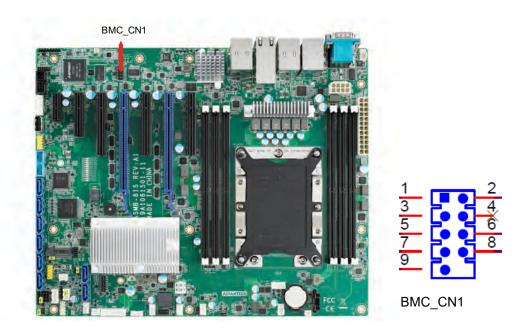

2.19 Front Panel SMBUS Connector (SMBUS1)

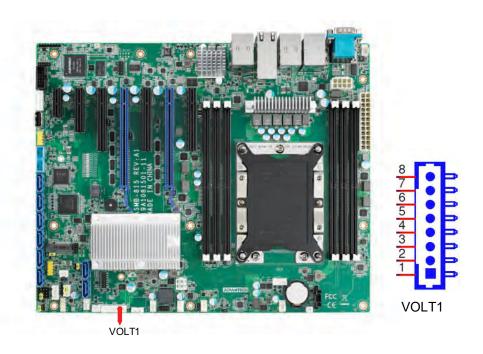

2.20 IPMI Module Connector (BMC_CN1)

Enabling IPMI feature through BMC_CN1 and BMC_CN2. The BMC module has already been pre-installed on ASMB-815I and ASMB-815T2 sku.

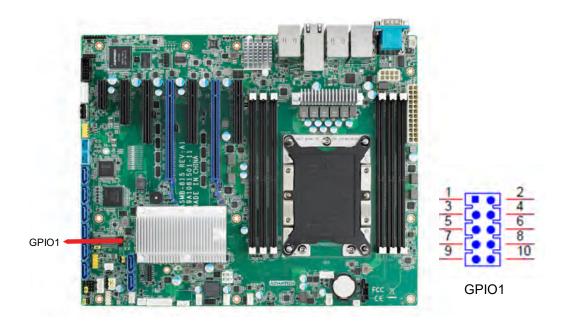

2.21 VOLT1 Connector (VOLT1)

VOLT1 connects to the alarm board on the Advantech chassis. These alarm boards give warnings if a power supply or fan fails, if the chassis overheats, or if the backplane malfunctions.

2.22 GPIO Connector (GPIO1)

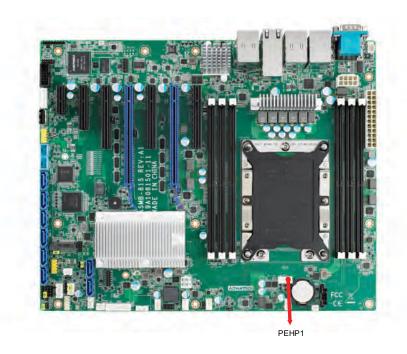

2.23 Intel Virtual RAID (VROC1)

Intel VROC license key of VMD allows NVMe SSDs to connect via PCIe and directly manage the CPU for better RAID performance. Enable NVMe SSD RAID, hot-plug and LED management features via the VROC connector.

2.24 NVMe RAID LED Control (PEHP1)

Connect to the storage chassis to enable NVMe RAID LED control feature.

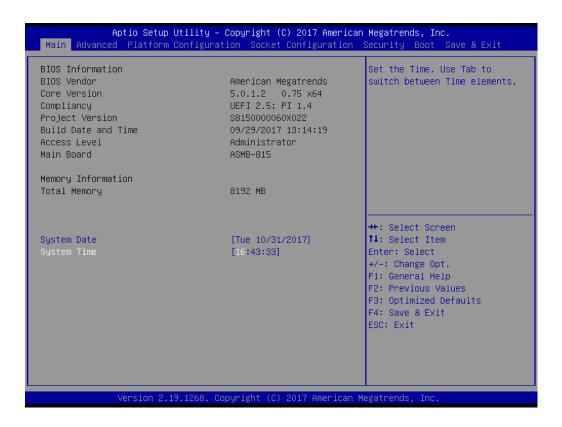

Chapter

AMI BIOS

3.1 Introduction

With the AMI BIOS Setup program, you can modify BIOS settings and control the special features of your computer. The Setup program uses a number of menus for making changes and turning the special features on or off. This chapter describes the basic navigation of the ASMB-815 setup screens.

AMI's BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed up CMOS so it retains the Setup information when the power is turned off.

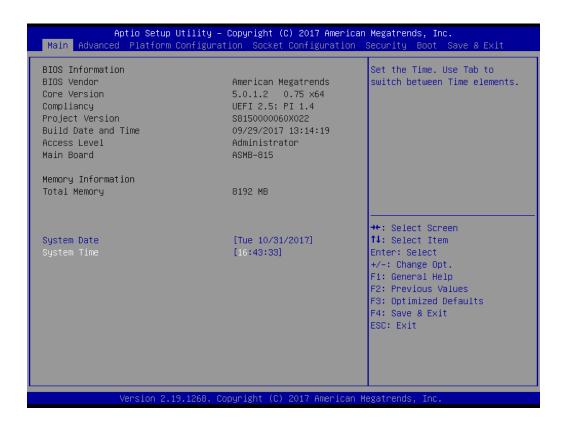

Note!

3.2 BIOS Setup

3.2.1 Main Menu

Press during bootup to enter AMI BIOS CMOS Setup Utility; the Main Menu will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

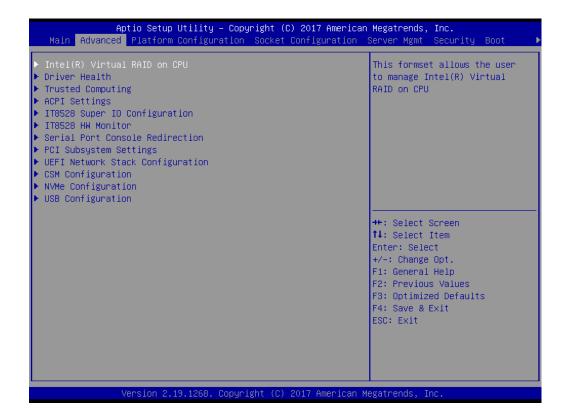

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can be. The right frame displays the key legend. Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

System Date/System Time

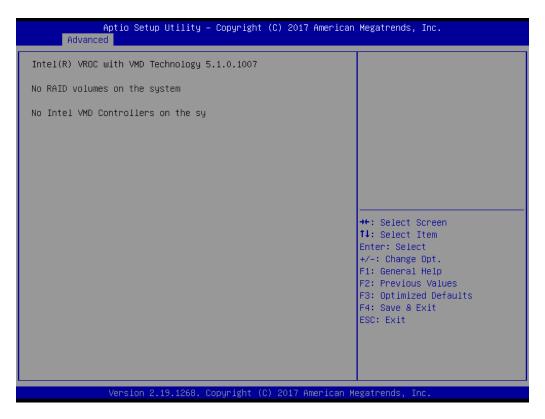

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

3.2.2 Advanced BIOS Features Setup

Select the Advanced tab from the ASMB-815 setup screen to enter the Advanced BIOS setup screen. You can select any of the items in the left frame of the screen, such as CPU configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screens are shown below. The sub menus are described on the following pages.

3.2.2.1 Intel Virtual RAID on CPU

3.2.2.2 Driver Health

3.2.2.3 Trusted Computing

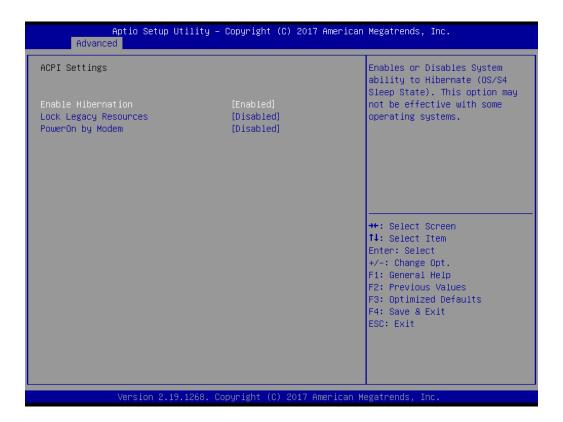

■ Security Device Support

Enables or disables BIOS support for security device.

Purchase Advantech LPC TPM module to use TPM function. P/N: PCA-TPM-00A1E_B1E.

3.2.2.4 ACPI Settings

Enable Hibernation

Enable or Disable hibernation feature.

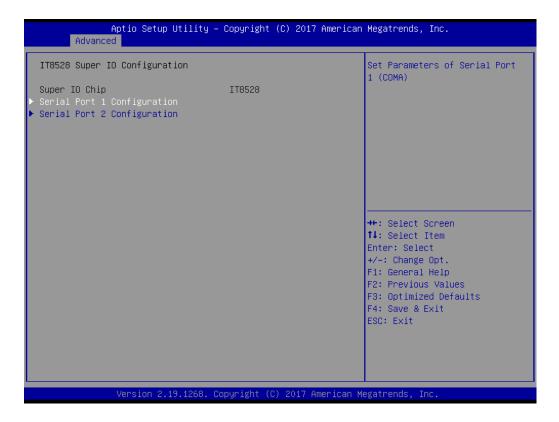

Lock Legacy Resources

Enable or Disable lock legacy resources feature.

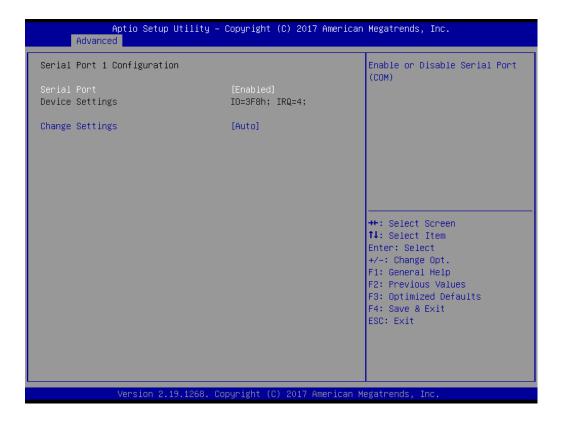

■ PowerOn By Modem

Enable or Disable power on by modem feature.

3.2.2.5 IT8528 EC Super IO Configuration

Serial Port 1 Configuration

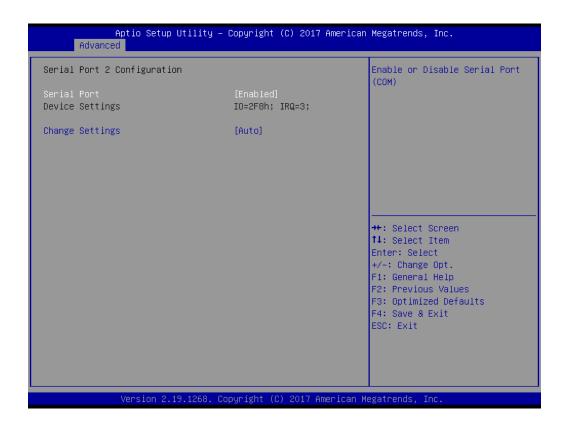

Serial Port

Enable or Disable serial port 1.

Change Settings

To select an optimal setting for serial port 1.

Serial Port 2 Configuration

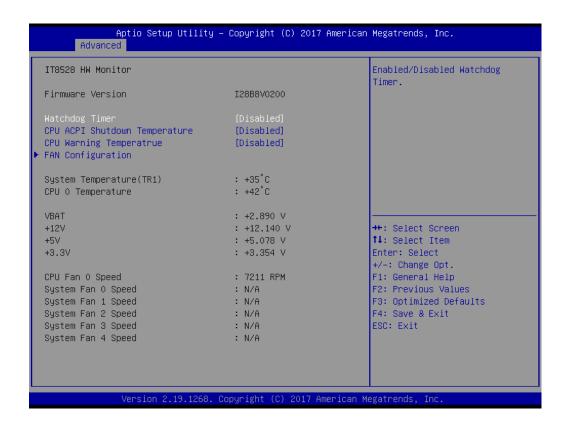

Serial Port

Enable or Disable serial Port 2.

- Change Settings

To select an optimal setting for serial port 2.

3.2.2.6 IT8528 HW Monitor

Watchdog Timer

Enable or Disable the watchdog timer function.

■ CPU ACPI Shutdown Temperature

Enable or Disable the ACPI shutdown temperature threshold. When the system reaches the shutdown temperature, it will be automatically shut down by ACPI OS to protect the system from overheat damage.

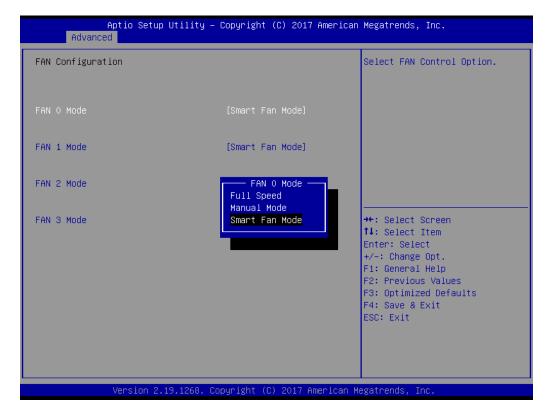

CPU Warning Temperature

Enable or Disable the CPU warning temperature threshold. When the system reaches the warning temperature, the speaker will beep.

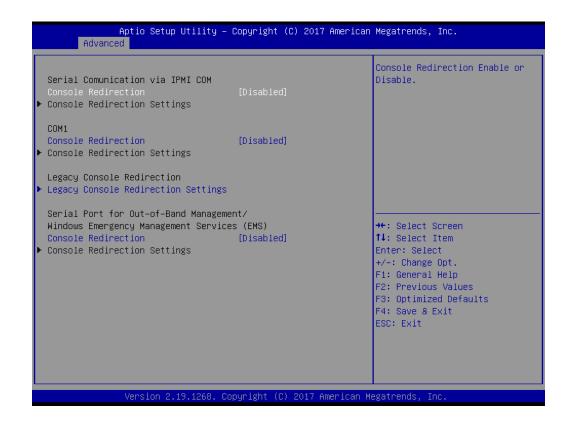

Fan Configuration

The default of CPU/System FAN is Smart FAN mode and the BIOS will automatically control the FAN speed by CPU temperature.

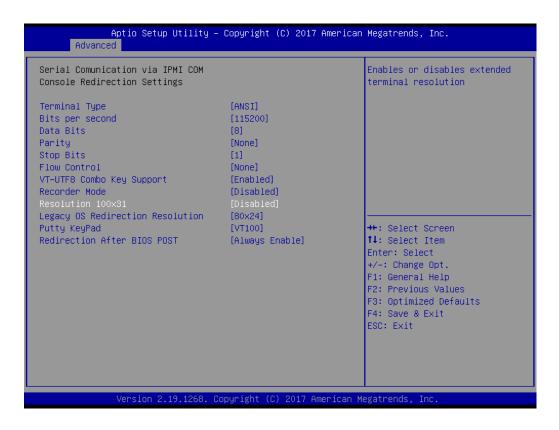

When set to manual mode, fan duty setting can be changed; the range is from 30%~100%, default setting is 50%.

3.2.2.7 Serial Port Console Redirection

■ COM1 Console Redirection Settings

- Terminal Type

Select a terminal type to be used for console redirection.

Options available: VT100/VT100+/ANSI/VT-UTF8.

- Bits Per Second

Select the baud rate for console redirection. Options available: 9600/19200/57600/115200.

- Data Bits

Parity

A parity bit can be sent with the data bits to detect some transmission errors.

Even: parity bit is 0 if the number of 1's in the data bits is even.

Odd: parity bit is 0 if number of 1's the data bits is odd.

Mark: parity bit is always 1. Space: Parity bit is always 0.

Mark and Space Parity do not allow for error detection.

Options available: None/Even/Odd/Mark/Space.

Stop Bits

Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.

Options available: 1/2.

Flow Control

Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.

Options available: None/Hardware RTS/CTS.

VT-UTF8 Combo Key Support

Enable VT-UTF8 combination key support for ANSI/VT100 terminals

Recorder Mode

When this mode enabled, only text will be send. This is to capture Terminal data.

Options available: Enabled/Disabled.

- Resolution 100x31

Enables or disables extended terminal resolution.

- Legacy OS Redirection Resolution

On Legacy OS, the number of rows and columns support redirection.

Options available: 80x24/80X25.

Putty Keypad

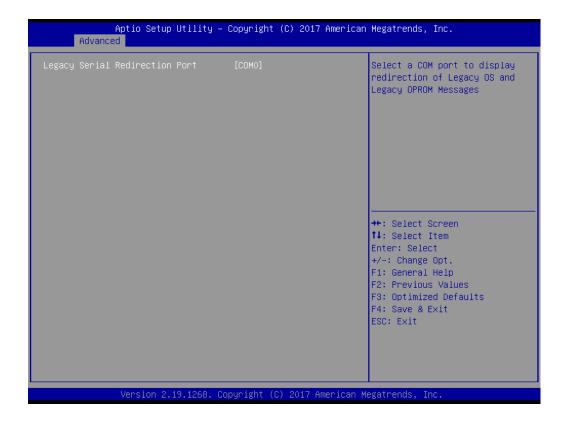

Select function key and keypad on putty.

- Redirection After BIOS Post

When Bootloader is selected, then Legacy Console Redirection is disabled before booting to legacy OS. When Always Enable is selected, then Legacy Console Redirection is enabled for legacy OS. Default setting for this option is set to Always Enable.

■ Legacy Console Redirection Settings

Select a COM port to display redirection of Legacy OS and Legacy OPROM Messages.

Console Redirection Settings

Out-of-Band Mgmt Port

To select the com port user would like to set for having console redirection feature.

- Terminal Type

Set as "VT100", "VT100+", "VT-UTF8", or "ANSI". "VT-UTF8" is the default setting.

- Bits Per Second

To select serial port transmission. Speed must be matched on the other side. It can be set as "9600", "19200", "57600", or "115200". "115200" is the default setting.

Flow Control

Flow control can prevent data loss from buffer overflow. It can be set as "None",

"Hardware RTS/CTS", or "Software Xon/Xoff". "None" is the default setting.

- Data Bits
- Parity
- Stop Bits

3.2.2.8 PCI Subsystem Settings

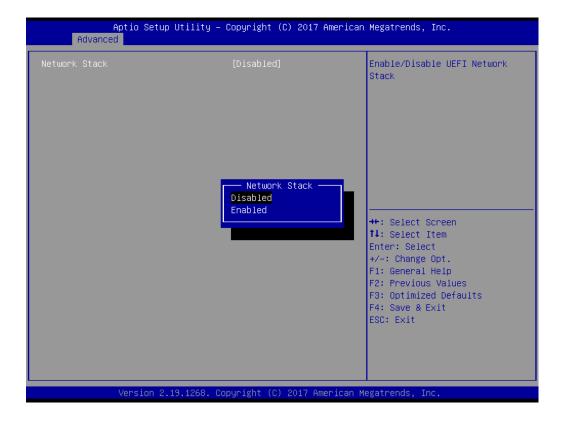

Above 4G Decoding

Enable or Disable 64-bit capability. Devices to be decoded in above 4G address space (only if the system supports 64-bit PCI decoding).

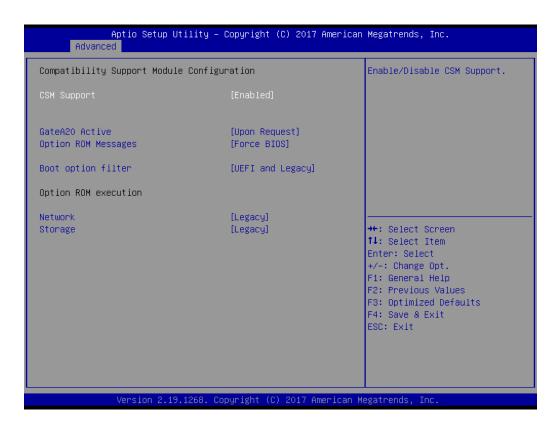

Note! Some graphic or GPU cards need to enable 4G Decoding.

3.2.2.9 UEFI Network Stack Configuration

Enable or Disable UEFI network stack function.

CSM Support

Enables or Disables UEFI CSM (Compatibility Support Module) to support a legacy PC boot process.

■ GateA20 Active

This item is useful when RT code is executed above 1MB. When it's set as "Upon Request", GA20 can be disabled using BIOS services. When it's set as "Always", it does not allow disabling of GA20.

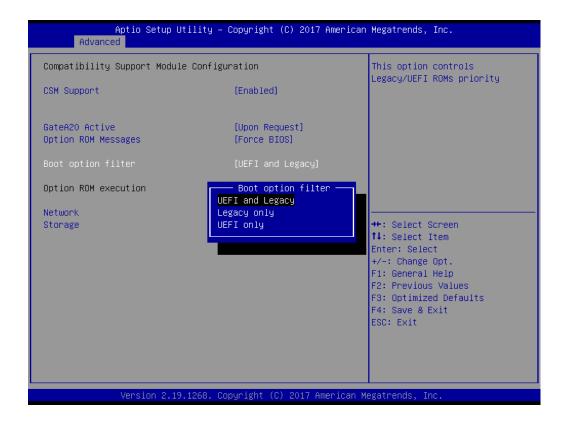

Option ROM Messages

To "Force BIOS or keep current" to set the display mode for Option ROM.

■ Boot option filter

Change UEFI/legacy ROM priority for boot option.

Network

Control the execution of UEFI and legacy PXE OpROM.

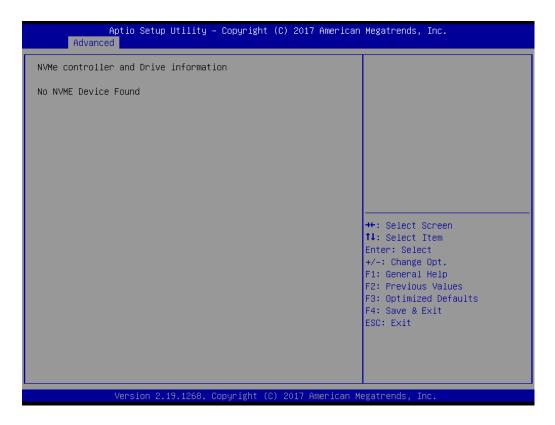

Storage

Control the execution of UEFI and legacy storage OpROM.

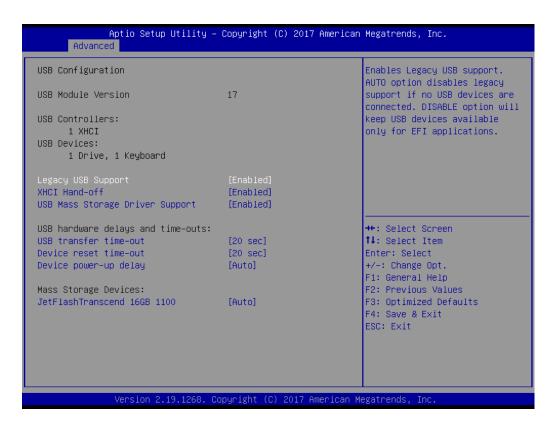

3.2.2.11 NVMe Configuration

Setup NVMe device options.

3.2.2.12 USB Configuration

Legacy USB Support

This is for supporting USB device under a legacy OS such as DOS. When choosing "Auto", the system will automatically detect if any USB device is plugged into the computer and enable USB legacy mode when a USB device is plugged, or disable USB legacy mode when no USB device is attached.

XHCI Hand-off

This is a workaround for OS without XHCI hand-off support.

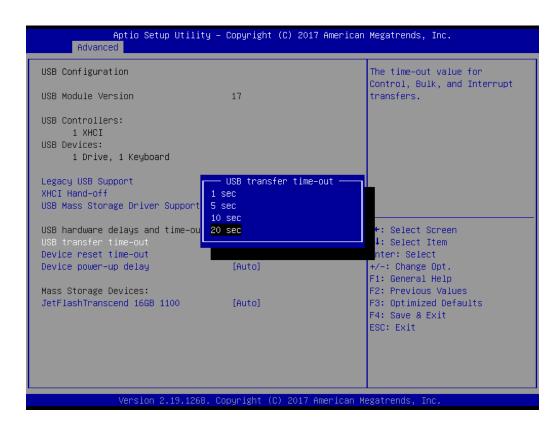

The XHCl ownership change should be claimed by XHCl driver.

■ USB Mass Storage Driver Support

Enable or Disable USB mass storage driver support.

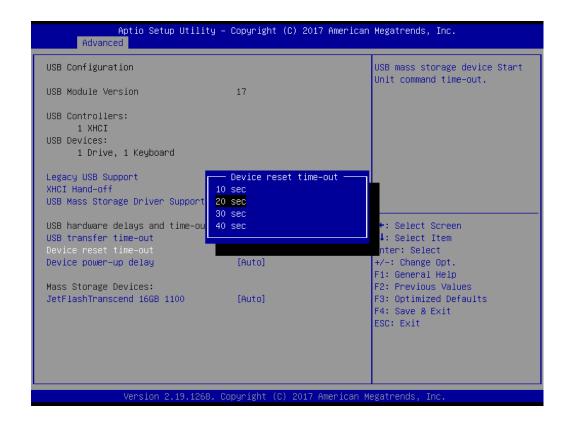

■ USB Transfer Time-out

Selects the USB transfer time-out value. [1,5,10,20sec]

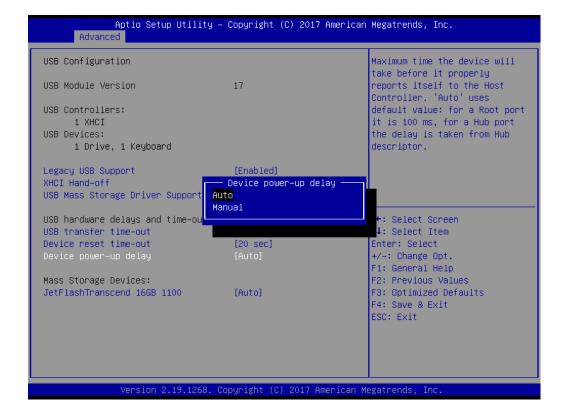

Device Reset Time-out

Selects the USB device reset time-out value. [10,20,30,40 sec]

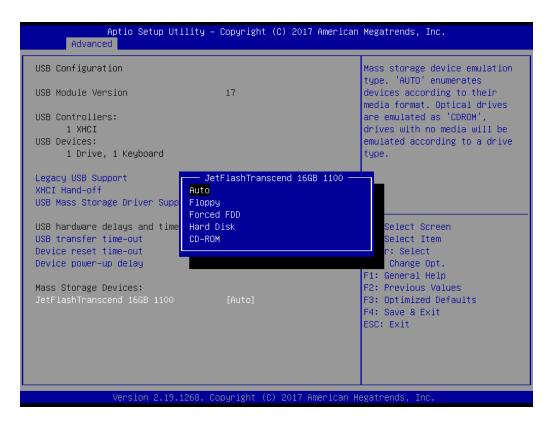

■ Device Power-up Delay

This item appears only when Device power-up delay item is set to [manual].

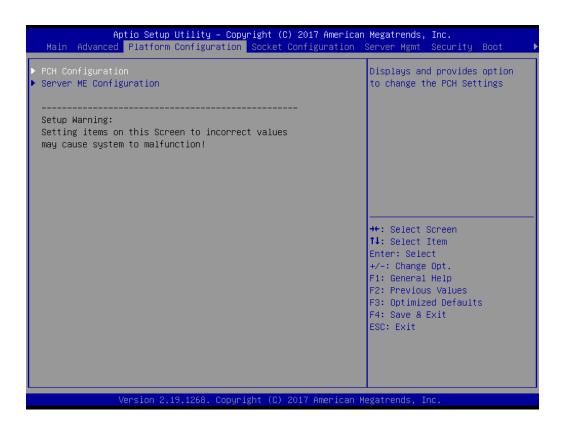

Mass Storage Devices

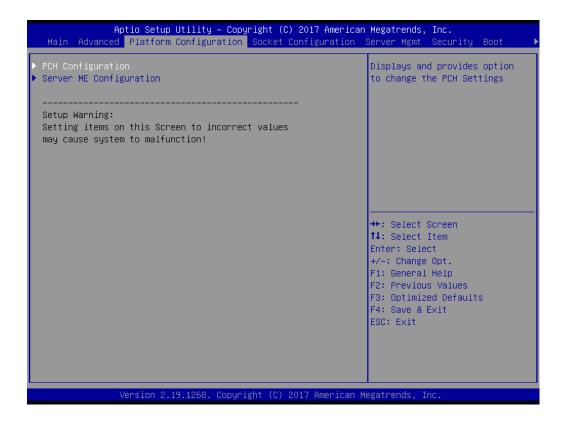

Default is "Auto" to enumerate mass storage devices according to media format.

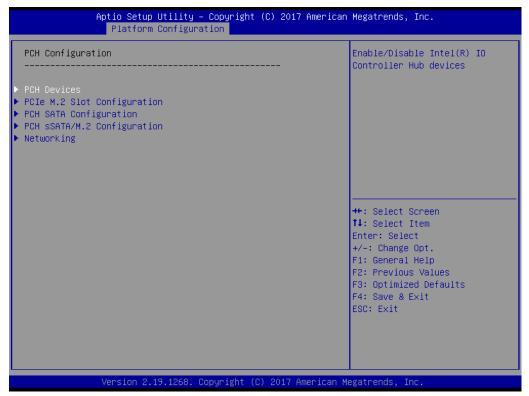

3.2.3 Platform Configuration

3.2.3.1 PCH Configuration

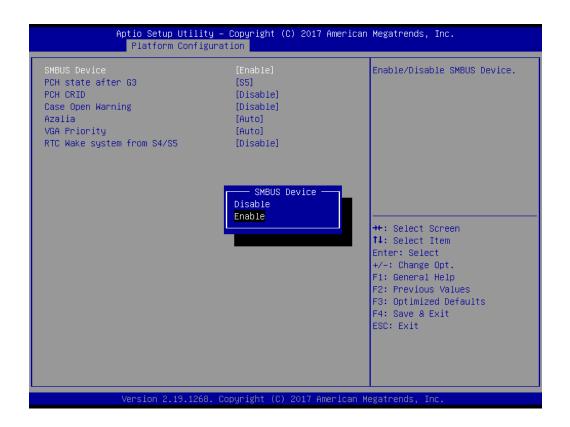

PCH Devices

This item is to set up IO Controller Hub devices.

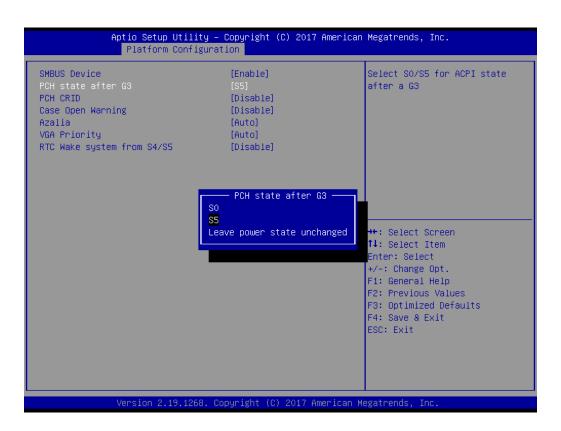

- SMBus Controller

Enable or Disable SMBus controller.

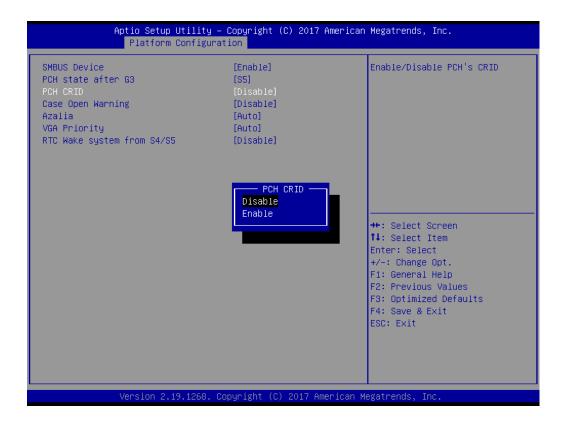

PCH state after G3

Select S0/S5 for ACPI state after G3.

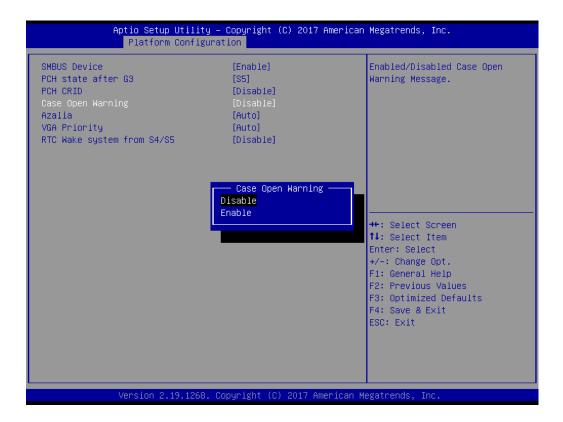

- PCH CRID

Enable or Disable PCH compatibility revision ID (CRID) functionality.

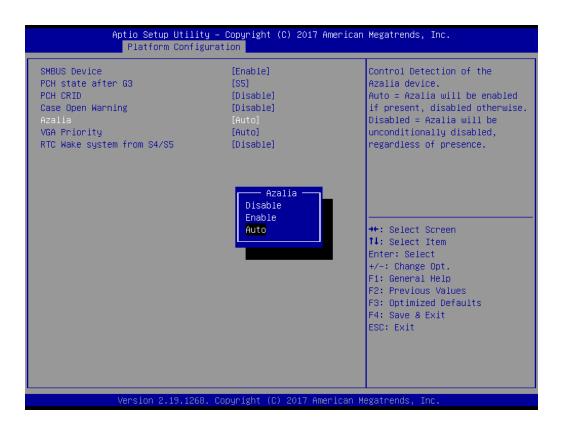

- Case Open Warning

Enable or Disable the chassis intrusion monitoring function. When enabled and the case is opened, the warning message will show in the POST screen.

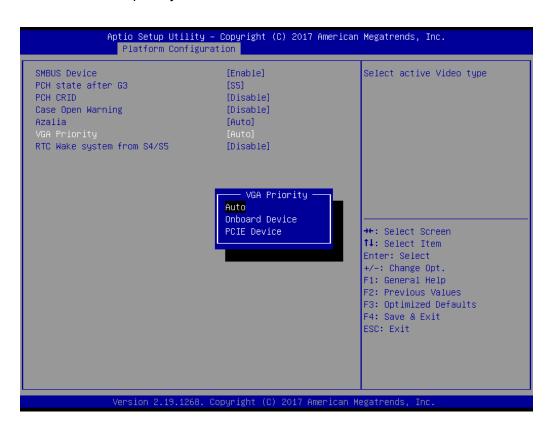

Azalia

Enable or Disable Azalia device.

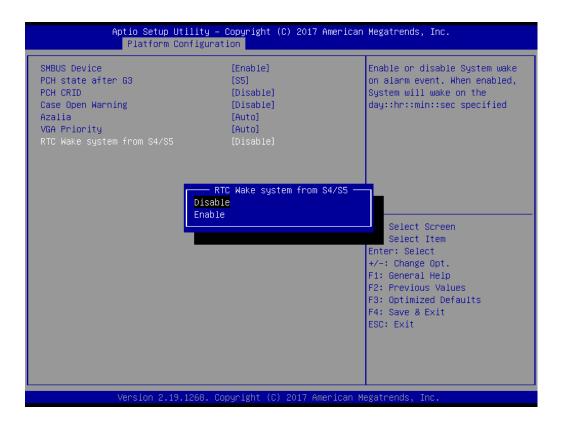

VGA Priority

Determines priority between onboard and 1st off-board video device found.

- RTC Wake system from S4/S5

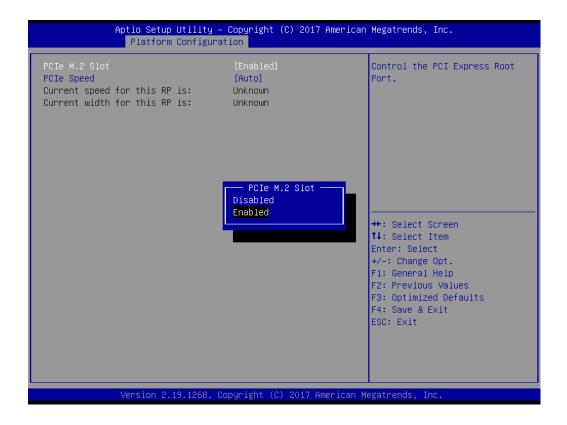

Enable or Disable system wake on alarm event.

■ PCle M.2 Slot Configuration

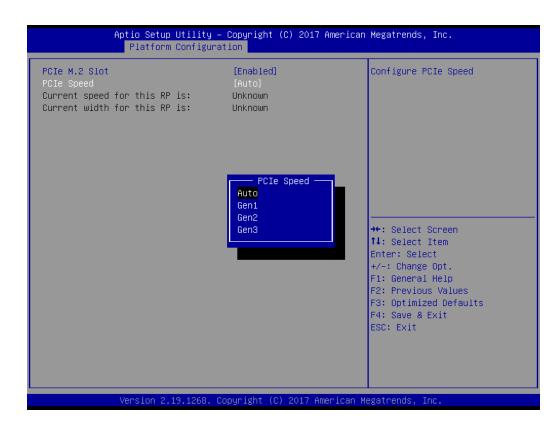

- PCIe M.2 Slot

Enable or Disable the PCI Express root port.

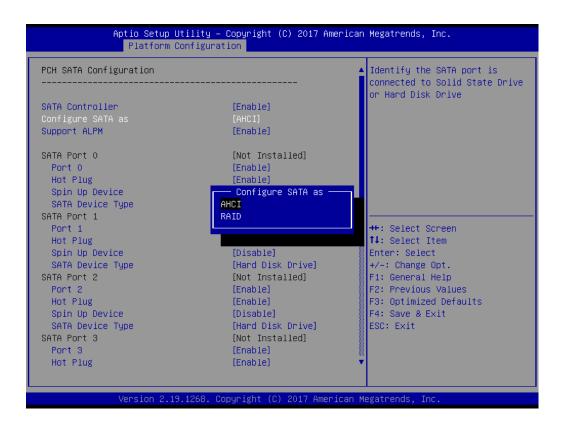

PCle Speed

Configure PCI Express speed.

■ PCH SATA Configuration

SATA Controller

Enable or Disable SATA devices.

- Configure SATA as

Set as AHCI or RAID when SATA controllers are enabled.

Support ALPM

Enable or Disable Aggressive Link Power Management (ALPM) protocol for Advanced Host Controller Interface-compliant (AHCI) Serial ATA (SATA) devices.

- SATA Port 0~7

Enable or Disable SATA port 0~7.

Hot Plug Port 0~7

Designates SATA port 0~7 as hot pluggable.

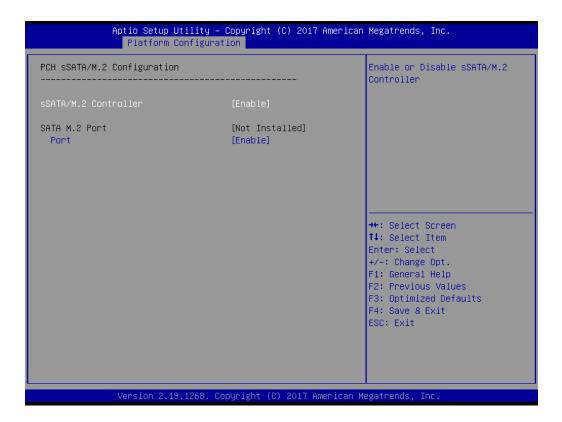

SATA Port 0~7 Spin Up Device

On an edge detect from 0 to 1, the PCH starts a COMRESET initialization sequence to the device.

SATA Port 0~7 Device Type

To identify the SATA is connected to Solid State Drive or Hard Disk Drive.

■ PCH sSATA/M.2 Configuration

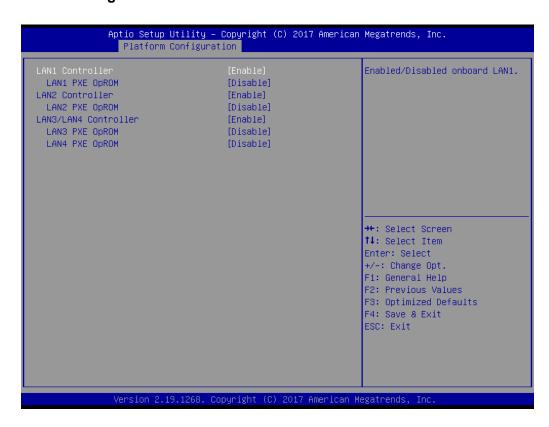

sSATA/M.2 Controller

Enable or Disable sSATA/M.2 Controller.

SATA M.2 Port

Enable or Disable SATA port.

Networking

- LAN1 Controller

Enable or Disable Intel I210 Controller support.

LAN1 PXE OpROM

Enable or Disable Boot option for Intel I210 controller.

- LAN2 Controller

Enable or Disable Intel I210 Controller support.

LAN2 PXE OpROM

Enable or Disable Boot option for Intel I210 controller.

LAN3/LAN4 Controller

Enable or Disable Intel X557 controller support.

LAN3 PXE OpROM

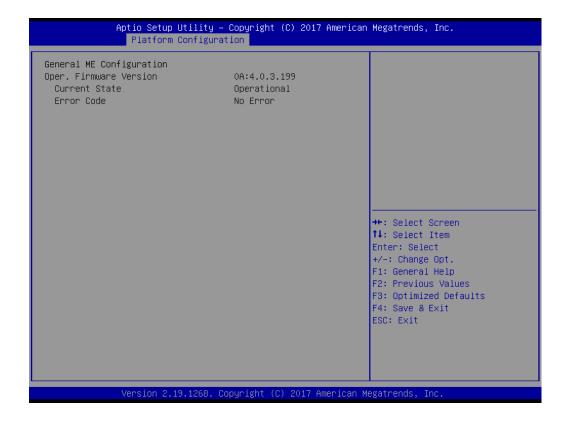

Enable or Disable boot option for Intel X557 controller.

- LAN4 PXE OpROM

Enable or Disable boot option for Intel X557 controller.

3.2.3.2 Server ME Configuration

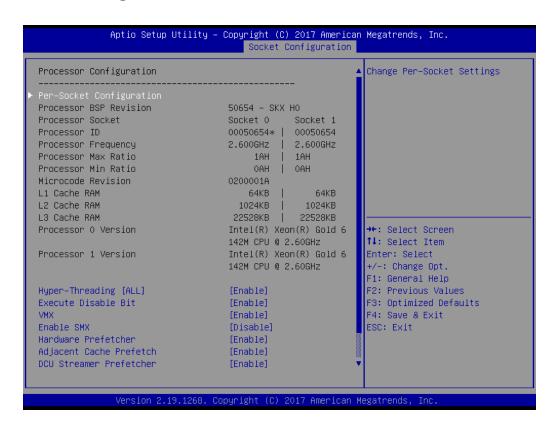

This page shows the Server ME configuration information.

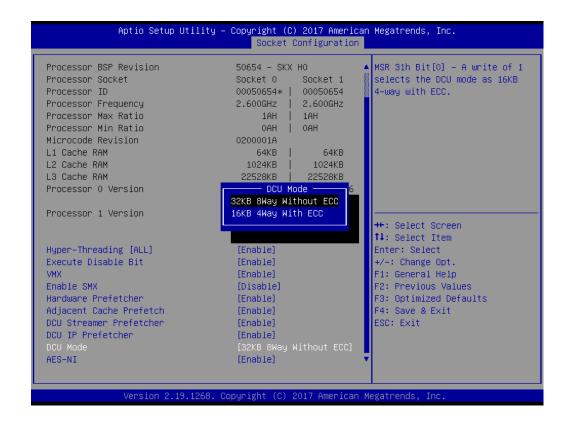

3.2.4 Socket Configuration

3.2.4.1 Processor Configuration

■ Per-Socket Configuration

Use this to select how many processor cores you want to activate when you are using a dual or quad core processor.

Hyper-threading [All]

Enable or Disable Intel Hyper Threading technology.

Execute Disable Bit

Enable or Disable the Execute Disable Bit feature. The Optimal and Fail-Safe default setting is Enabled. If Disabled is selected, the BIOS forces the XD feature flag to always return to 0.

■ VMX

Enable or disable Intel Virtual Machine Extensions (VMX) for IA-32 processors that support Intel[®] Vanderpool Technology

Enable SMX

Enable or Disable the Safer Mode Extensions. Safer Mode Extensions (SMX) provide a means for system software to launch an MLE and establish a measured environment within the platform to support trust decisions by end users.

Hardware Prefetcher

Hardware Prefetcher is a technique that fetches instructions and/or data from memory into the CPU cache memory well before the CPU needs it, so that it can improve the load-to-use latency.

Adjacent Cache Prefetch

The Adjacent Cache-Line Prefetch mechanism, like automatic hardware prefetch, operates without programmer intervention. When enabled through the BIOS, two 64-byte cache lines are fetched into a 128-byte sector, regardless of whether the additional cache line has been requested or not.

■ DCU Streamer Prefetcher

Enable prefetch of next L1 data line based upon multiple loads in same cache line.

■ DCU IP Prefetcher

Enable prefetch of next L1 line based upon sequential load history.

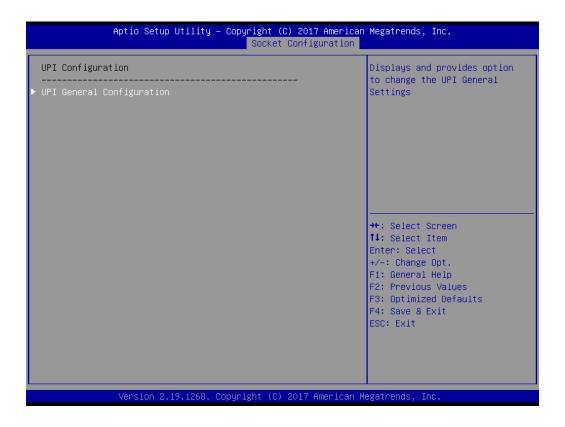

DCU Mode

Change the data cache unit mode.

■ AES-NI

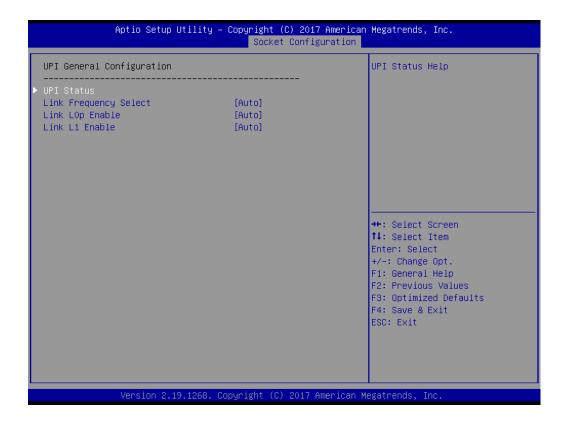

This item is Enables or Disables CPU advanced encryption standard instructions.

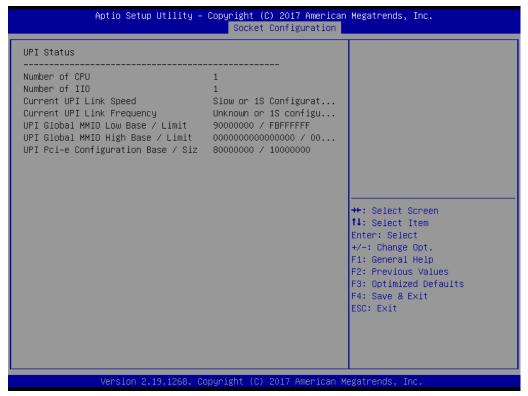

3.2.4.2 UPI Configuration

■ UPI Status

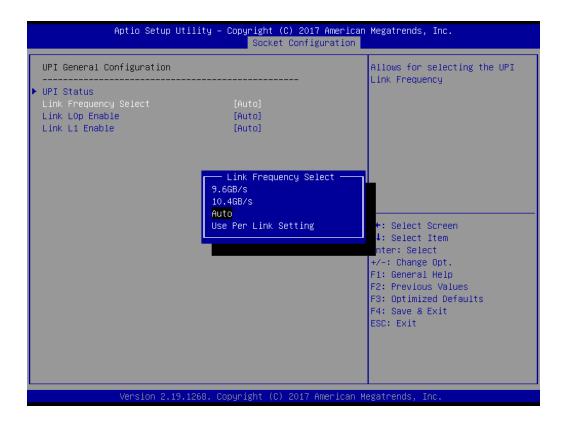

Display information of Intel UltraPath Interconnect (UPI).

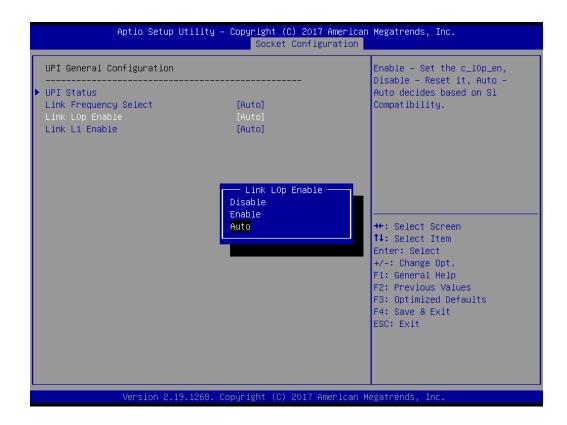

■ Link Frequency Select

Allows for selecting the QPI Link frequency.

■ Link L0p Enable

Enable or Disable QPI Link0p.

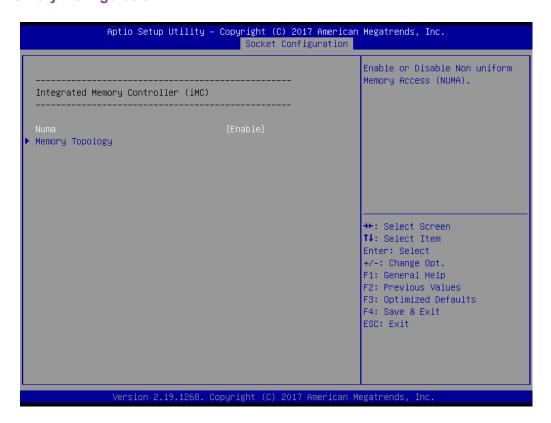

Link L1 Enable

Enable or Disable QPI Link1.

3.2.4.3 Memory Configuration

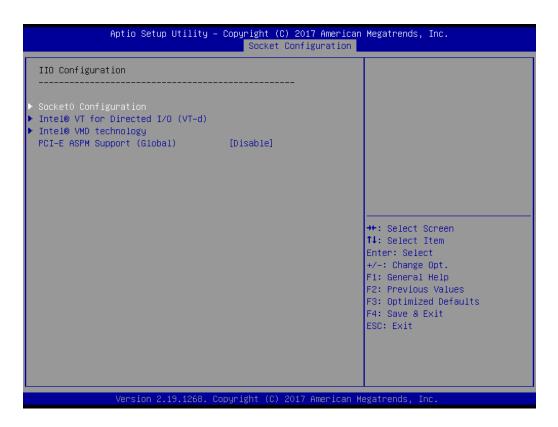

Numa

Enable or Disable non-uniform memory access (NUMA).

Memory Technology

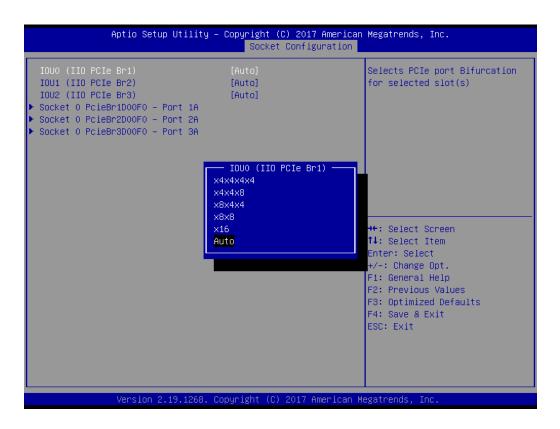

Display memory topology with DIMM population information.

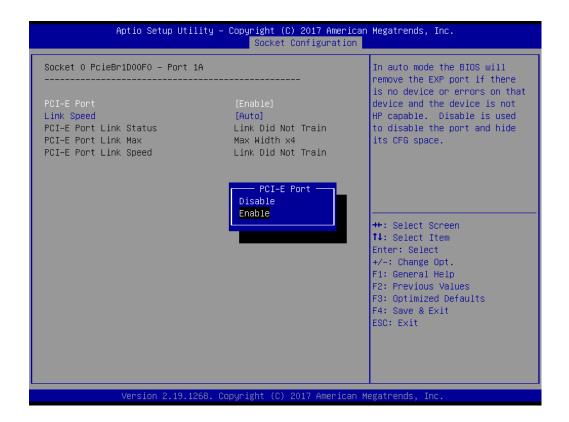

3.2.4.4 IIO Configuration

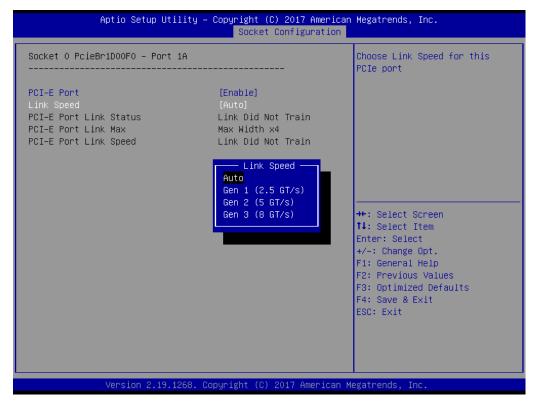

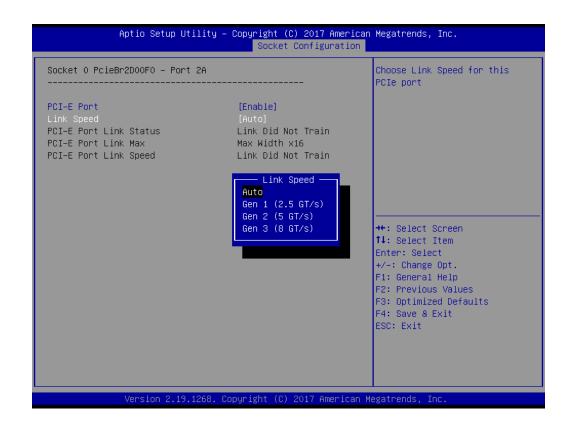

Socket0 PCIe Configuration

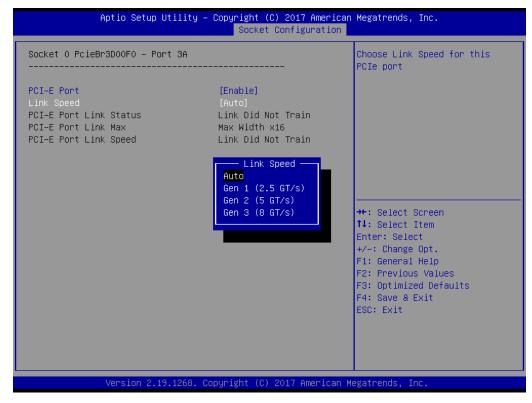

PCIe port bifurcation control and select target link speed as Gen1, Gen2, Gen3.

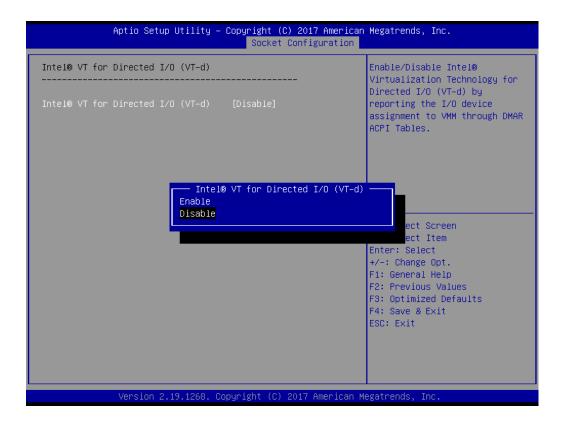

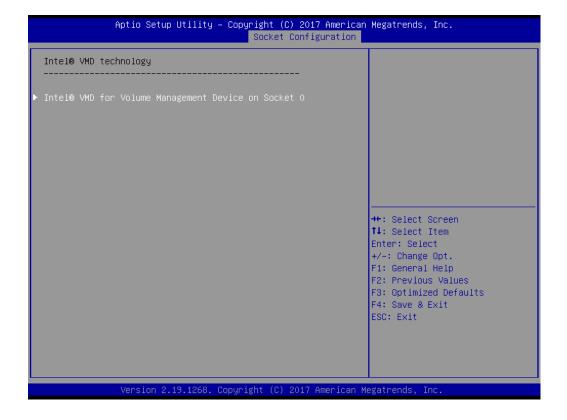

■ Intel VT for Directed I/O (VT-d)

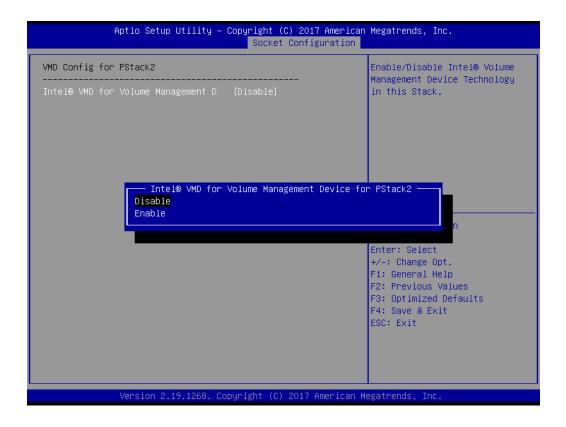

Enable or Disable Intel Virtualization Technology for Directed I/O.

■ Intel VMD technology

Enable or Disable Intel Volume Management Device Technology.

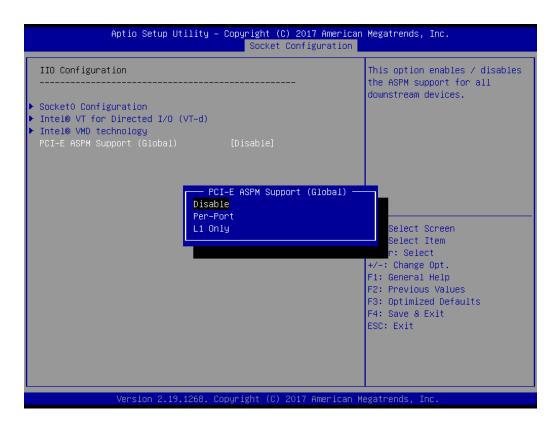

PCIe Hot Plug

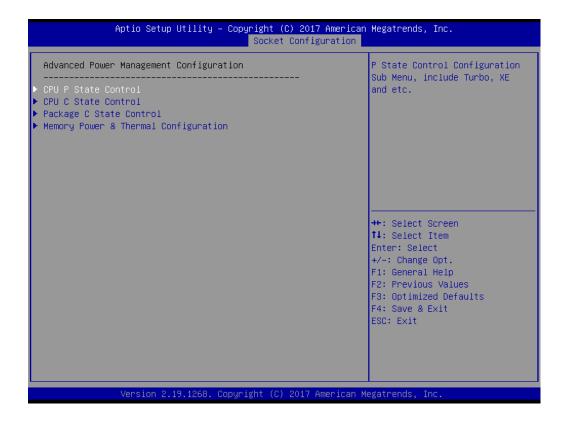

Enable or Disable PCle hot plug globally. This item is hidden.

PCI-E ASPM Support (Global)

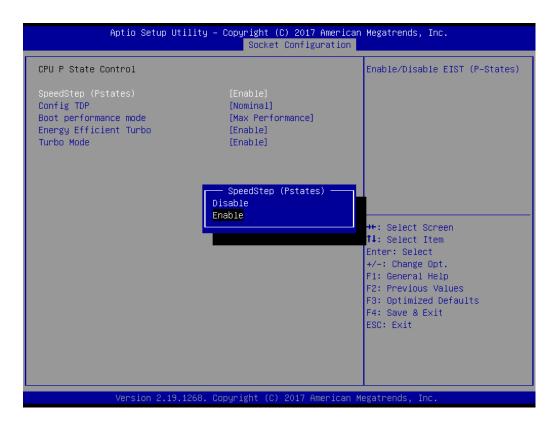

Set the ASPM level to Disable, Per-Port or L1 state only.

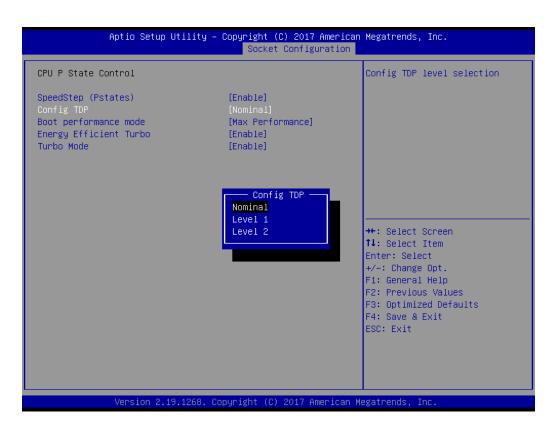

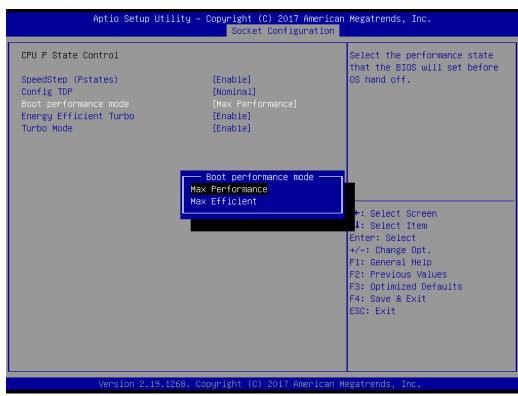

3.2.4.5 Advanced Power Management Configuration

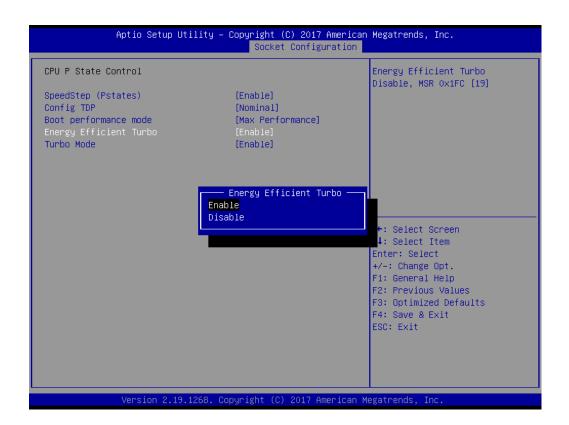

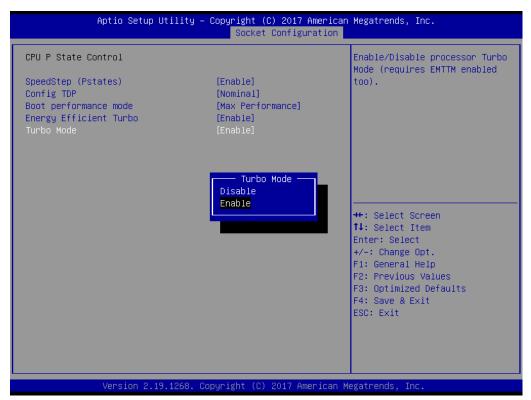

■ CPU P State Control

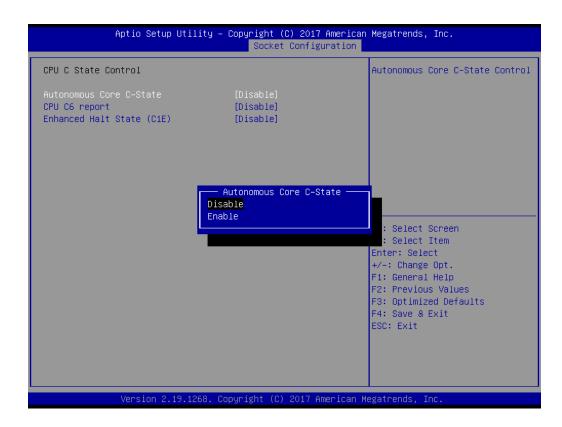

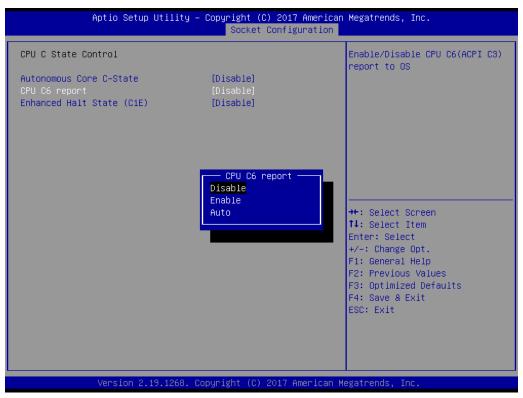

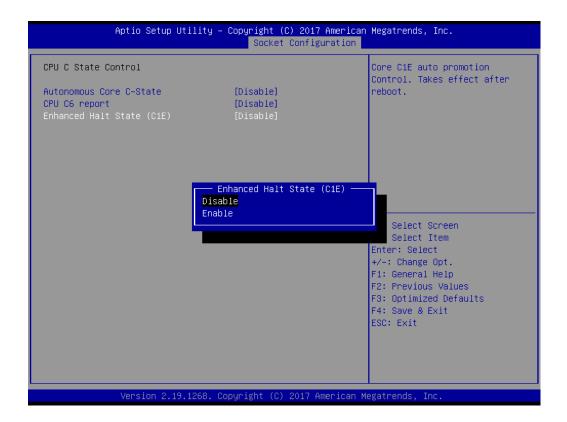

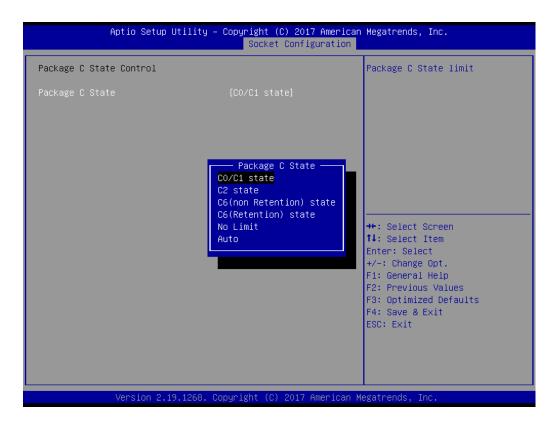

CPU C State Control

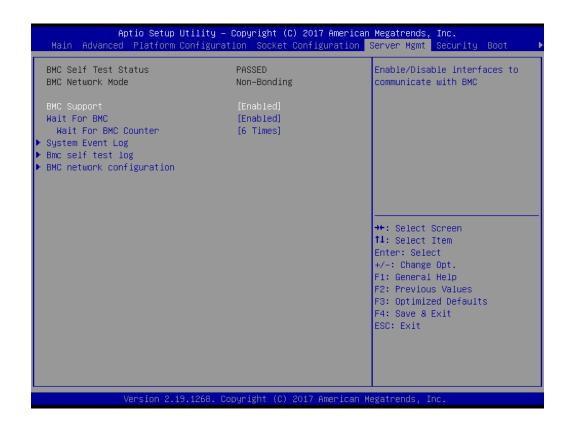

■ Package C State Control

Memory Power & Thermal Configuration

3.2.5 Server Management

- **BMC Support**
 - Enable or Disable interfaces to communicate with BMC.
- Wait for BMC

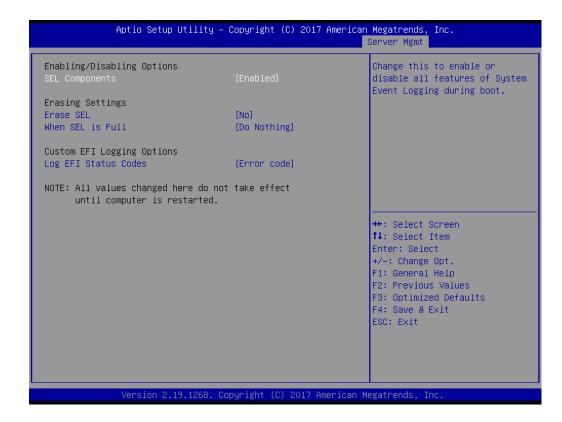

If enabled, motherboard will wait $30 \sim 60$ seconds until BMC module boots up completely. After that, the normal BIOS post screen will be displayed. If disabled, motherboard will not wait for BMC module's response.

■ Wait for BMC counter

Initialize host to BMC interfaces.

The MB beeps per 5 seconds to check it.

3.2.5.1 System Event Log

SEL Components

Enable/Disable all features of system event logging during boot.

Erase SEL

Choose options for erasing SEL.

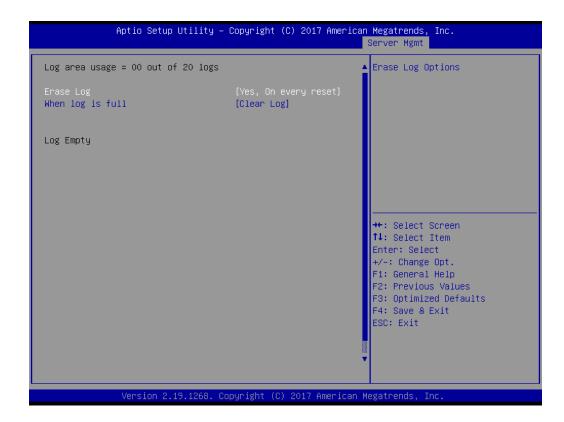

When SEL is Full

Choose options for reactions to a full SEL.

■ Log EFI Status Codes

Disable the logging of EFI status codes or log only error code or only progress code or both.

3.2.5.2 BMC Self Test Log

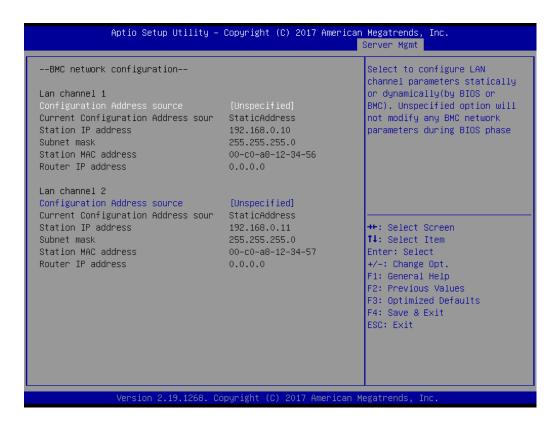

■ Erase Log

Erase log options.

■ When Log is Full

Select the action to be taken when log is full.

3.2.5.3 BMC Network Configuration

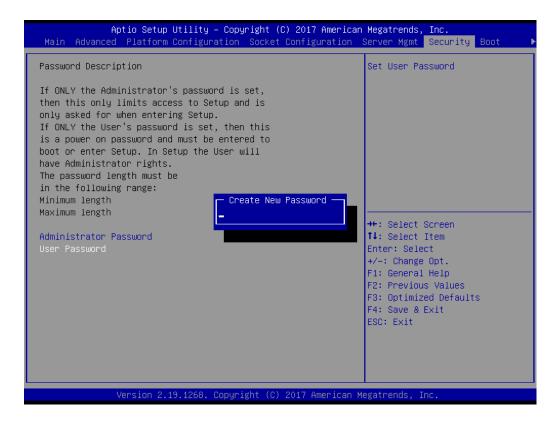

Configuration Address Source

Select to configure LAN channel parameters statically or dynamically (by BMC). Unspecified option will not modify any BMC network parameters during BIOS phase.

3.2.6 Security

Note! With AC power & Battery. Short CMOS1 Jumper:

Date/Time & Password: Keep

Setting: reset to default

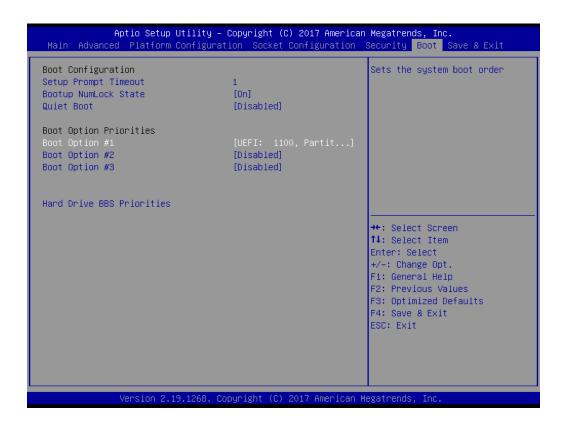

AC power and CMOS battery are removed. Short CMOS1 Jumper:

Date/Time: reset to default

Password: Keep

Setting: reset to default

3.2.7 Boot

Setup Prompt Timeout

Number of seconds to wait for setup activation key.

■ Bootup NumLock State

Select the keyboard NumLock state as "On" or "Off".

Quiet Boot

Enable or Disable quiet boot option.

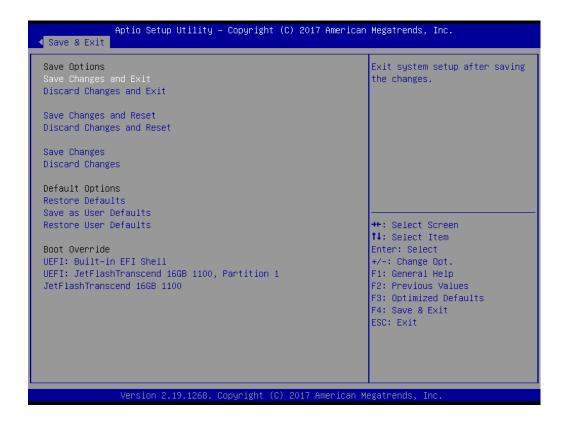

Boot Option Priorities

Sets the system boot priorities.

■ Hard Drive BBS Priorities

Display this item when external legacy devices are plugged in to set boot priorities.

3.2.8 Save & Exit

Save Changes and Exit

Exit system setup after saving the changes.

■ Discard Changes and Exit

Exit system setup without saving any changes.

Save Changes and Reset

Reset the system after saving changes.

Discard Changes and Reset

Reset system setup without saving any changes.

Save Changes

Save changes done so far to any of the setup options.

Discard Changes

Discard changes done so far to any of the setup options.

Restore Defaults

Restore/Load default values for all the setup options.

Save as User Defaults

Save the changes done so far as user defaults.

Restore User Defaults

Restore the user defaults to all the setup options.

Chapter

Chipset Software Installation Utility

4.1 Before Beginning

To facilitate the installation of the enhanced display drivers and utility software, read the instructions in this chapter carefully. The drivers for the ASMB-815 are located on the software installation CD.

Before beginning, it is important to note that most display drivers need to have the relevant software application already installed on the system prior to installing the enhanced display drivers. In addition, many of the installation procedures assume that you are familiar with both the relevant software applications and operating system commands. Review the relevant operating system commands and the pertinent sections of your application software's user manual before performing the installation.

4.2 Introduction

The Intel Chipset Software Installation (CSI) utility installs the Windows INF files that outline to the operating system how the chipset components will be configured. This is needed for the proper functioning of the following features:

- Core PCI PnP services
- Serial ATA interface support
- USB 1.1/2.0/3.0 support
- Identification of Intel chipset components in the Device Manager

Note!

The files on the software installation CD are compressed. Do not attempt to install the drivers by copying the files manually. You must use the supplied SETUP program to install the drivers.

Note!

The chipset driver is used for the following versions of Windows, and it has to be installed before installing all the other drivers:

Windows Server 2016 Standard x64
Windows Server 2012 R2 Standard x64
Windows 10 Ultimate x64

Note!

It is necessary to update all the latest Microsoft hot fix files when using this OS.

4.3 Windows Series Driver Setup

Insert the driver CD into your system's CD-ROM drive. When the folder is displayed, move the mouse cursor over the folder "01_Chipset". Find the executable in this folder, click to install the driver.

Chapter

Graphic Setup

5.1 Introduction

Install the ASPEED VGA driver to enable this function, which includes the following features:

- 32-bit 2D graphics engine on board for normal use.
- 64 MB RAM for this chip, the highest resolution is 1920x1200.

5.2 Windows Series Driver Setup

Insert the driver CD into your system's CD-ROM drive. When the folder is displayed, navigate to the "02_Graphic" folder and click the executable file to complete the installation of the drivers for the OS that you need.

Note!

- 1. If ASMB-815 carries an additional graphics card for VGA output, please set this additional graphic card as "major output" under the "Display properties" of OS.
- 2. The WDDM driver can support for the following OS versions:
 - Windows 8 x86/x64 version
 - Windows 8.1 x86/x64 version
 - Windows Server 2012 version (WHQL)
 - Windows Server 2012R2 version (WHQL)
 - Windows 10 x86/x64 version
 - Windows Server 2016 version (WHQL)
- 3. ASPEED Graphics WDDM Driver Limitation on Microsoft Windows OS
 - It is a non-WHQL certified driver because ASPEED VGA is a 2D VGA, it cannot meet the WHQL requirement of WDDM drivers which require 3D VGA functions.
 - Because it is a non-WHQL certified driver, it may have some compatibility issues with some specific applications

Chapter

6

LAN, USB 3.0 and RSTe RAID

6.1 LAN Configuration

6.1.1 Introduction

ASMB-815 serverboard features two Gigabit Ethernet LAN connections via dedicated PCI Express x1 lanes: GbE LAN1 (Intel[®] I210) and GbE LAN2 (Intel[®] I210), and two 10GbE LAN3 and LAN4 (Intel[®] X557 PHY). These connections eliminate bottlenecks of network data and incorporate Gigabit Ethernet at 10 Gbps.

- 10/100/1000 & 10G Base-T Ethernet controller
- 10/100/1000 & 10G Base-T triple-speed MAC
- Full duplex at 10/100/1000 Mbps or 10 Gbps and half duplex at 10/100/1000 Mbps
- Wake-on-LAN (WOL) support
- PCIe x1 host and PHY interface

The integrated Intel gigabit Ethernet controller supports all major network operating systems. However, the installation procedure varies with different operating systems.

6.1.2 Windows Series Driver Setup

Insert the driver CD into your system's CD-ROM drive. Select folder "03_LAN" then click the proper LAN driver for the OS.

6.2 USB 3.0

6.2.1 Introduction

ASMB-815 offers six USB 3.0 ports, two in rear side and four via onboard header. The USB 3.0 could provide the bandwidth up to 500MB/s to shorter the time for data transmission.

6.2.2 Windows Series Driver Setup

Insert the driver CD into your system's CD-ROM drive. Select folder "04_USB" then click the Setup.exe file for the installation.

6.3 SATA & PCIe SSD RAID

6.3.1 Introduction

Intel C621/C622 PCH chip offers SATA & PCIe SSD RAID under Windows operating system.

Note!

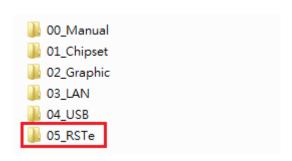

1.Please visit the Intel download center for "Intel Rapid Storage Technology enterprise for Microsoft Windows Operating System Software User's Guide" file download,

2. For the hot-fix file download, please visit Microsoft website.

6.3.2 Windows Series Driver Setup

Insert the driver CD into your system's CD-ROM drive. Select folder "05_RSTe" then click to install the proper driver for the OS.

Appendix A

Programming the Watchdog Timer

The ASMB-815's watchdog timer can be used to monitor system software operation and take corrective action if the software fails to function within the programmed period. This section describes the operation of the watchdog timer and how to program it.

A.1 Watchdog Timer Overview

The watchdog timer is built in to the EC controller IT8528E. It provides the following functions for user programming:

- Can be enabled and disabled by user's program
- Timer can be set from 1 to 255 seconds
- Generates an interrupt or reset signal if the software fails to reset the timer before time-out

A.2 Programming the Watchdog Timer

The I/O port address of the watchdog timer is as below:

Address	Description	
0x57	Event - Warm Reset: 0x04	
0x5E	Warm Reset Timer (High BYTE)	Based 100ms
0x5F	Warm Reset Timer (Low BYTE)	Dased 1001115

Here is an example to step by step program the Watchdog Timer.

Step	Action	Description
00	Read 0x299 port	Clear I/O port
	Wait IBF clear	0x29A, BIT1, = 0
01	Write 0x89 to 0x29A	
	Wait IBF clear	0x29A, BIT1, = 0
02	Write 0x5E to 0x299 port	
	Wait IBF clear	0x29A, BIT1, = 0
03	Write 0x00 to 0x299 port	Set 10 sec (high byte)
	Wait IBF clear	0x29A, BIT1, = 0
04	Write 0x89 to 0x29A	
	Wait IBF clear	0x29A, BIT1, = 0
05	Write 0x5F to 0x299 port	
	Wait IBF clear	0x29A, BIT1, = 0
06	Write 0x64 to 0x299 port	Set 10 sec (low byte)
	Wait IBF clear	0x29A, BIT1, = 0
07	Write 0x89 to 0x29A	
	Wait IBF clear	0x29A, BIT1, = 0

80	Write 0x57 to 0x299 port	Watchdog Event
	Wait IBF clear	0x29A, BIT1, = 0
09	Write 0x04 to 0x299 port	(Warm) Reset event
	Wait IBF clear	0x29A, BIT1, = 0
10	Write 0x28 to 0x29A	Start watchdog
	Wait	1~9 sec
	Wait IBF clear	0x29A, BIT1, = 0
11	Write 0x29 to 0x29A	Stop watchdog
	Wait IBF clear	0x29A, BIT1, = 0
12	Go to Step 07	

Appendix B

I/O Pin Assignments

B.1 USB2.0 Header (USB9_10, USB13_14)

Table B.1: USB Header (USB9_10, USB13_14)				
Pin	Signal	Pin	Signal	
1	USB_VCC5	2	USB_VCC5	
3	USB_D-	4	USB_D-	
5	USB_D+	6	USB_D+	
7	GND	8	GND	
		10	NC	

B.2 USB3.0 Header (USB3_56)

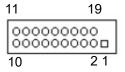

Table B.2: USB Header (USB3_56)				
Pin	Signal	Pin	Signal	
1	+5 V	2	STDA_SSRX-	
3	STDA_SSRX+	4	GND	
5	STDA_SSRX-TX-	6	STDA_SSRX+TX+	
7	GND	8	D-	
9	D+	10	NC (reserved for OC pin)	
11	D+	12	D-	
13	GND	14	STDA_SSRX+TX+	
15	STDA_SSRX-TX-	16	GND	
17	STDA_SSRX+	18	STDA_SSRX-	
19	+5 V	20		

B.3 VGA Connector (VGA1)

Table B.	Table B.3: VGA Connector (VGA1)			
Pin	Signal	Pin	Signal	
1	RED	9	VCC	
2	GREEN	10	GND	
3	BLUE	11	NC	
4	NC	12	SDT	
5	GND	13	H-SYNC	
6	GND	14	V-SYNC	
7	GND	15	SCK	
8	GND			

B.4 RS-232 Interface (COM2)

Table B.4: RS-232 Connector (COM2)		
Pin	Signal	
1	DCD	
2	DSR	
3	RXD	
4	RTS	
5	TXD	
6	CTS	
7	DTR	
8	RI	
9	GND	

B.5 External Keyboard Connector (KBMS2)

Table B.5: External Keyboard Connector (KBMS2)			
Pin	Signal		
1	KB CLK		
2	KB DATA		
3	MS DATA		
4	GND		
5	VCC		
6	MS CLK		

B.6 System & CPU Fan Power Connector (SYSFAN0~4, CPUFAN0)

Table B.6: CPU FAN Connector (CPUFAN0)		
	CPUFAN0	
1	GND	
2	+12V	
3	CPU_TACH	
4	CPU0_PWM	

Table B.7: SYS FAN Connector (SYSFAN0~4)					
	SYS FAN0	SYS FAN1	SYS FAN2	SYSFAN3	SYSFAN4
1	GND	GND	GND	GND	GND
2	+12V	+12V	+12V	+12V	+12V
3	FAN0_TACH	FAN1_TACH	FAN2_TACH	FAN3_TACH	FAN4_TACH
4	FAN0_PWM	FAN1_PWM	FAN2_PWM	FAN3_PWM	FAN4_PWM

B.7 Power LED (JFP3)

1 2 3

Table B.8: Power LED Connector (JFP3)		
Pin	Function	
1	LED power (3.3 V)	
2	NC	
3	LED power	
4	Keylock	
5	Ground	

B.8 External Speaker Connector (JFP2)

1 4 7 10

Table B.9: External Speaker Connector (JFP2)		
Pin	Function	
1	SPK+	
4	NC	
7	BZ-	
10	SPK-	

B.9 Reset Connector (JFP1)

9 12

Table B.10: Reset Connector (JFP1)		
Pin	Signal	
9	RESET	
12	GND	

B.10 HDD LED Connector (JFP2)

2 5 OO

Table B.11: HDD LED Connector (JFP2)		
Pin	Signal	
2	HDD_LED+	
5	HDD_LED-	

B.11 ATX Soft Power Switch (JFP1)

3 6 OO

Table B.12: ATX Soft Power Switch (JFP1)		
Pin	Signal	
3	PWR-BTN	
6	GND	

B.12 SMBus Connector (SMBUS1)

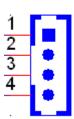

Table B.13: Front panel SMBus Connector (SMBUS1)		
Pin	Signal	
1	+5V	
2	SMB_SCL_FRU	
3	SMB_SDA_FRU	
4	GND	

B.13 LAN Ports (LAN1~5)

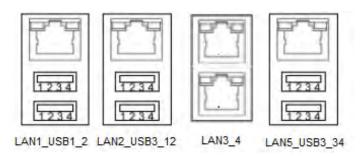

Table B.14: LAN RJ-45 Port (LAN1~2, LAN3_4, LAN5)			
Pin	Signal	Pin	Signal
1	MID0+	4	MID2+
2	MID0-	5	MID2-
3	MID1+	7	MID3+
6	MID1-	8	MID3-

B.14 Audio Connector (HDAUD1)

Table B.15: Front Panel Audio Connector (HDAUD1)			
Pin	Signal	Pin	Signal
1	ACZ_VCC	2	GND
3	ACZ_SYNC	4	ACZ_BITCLK
5	ACZ_SDOUT	6	ACZ_SDIN0
7	ACZ_SDIN1	8	ACZ_RST
9	ACZ_12V	10	GND
11	GND	12	x

B.15 Alarm Board Connector (VOLT1)

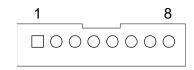

Table B.16: Alarm Board Connector (VOLT1)			
Pin	Signal	Pin	Signal
1	5VSB	5	+5V
2	GND	6	+3.3V
3	GND	7	-12V
4	-5V	8	+12V

B.16 Case Open Connector (JCASE1)

Table B.17: Case Open Connector (JFP1)		
Pin	Signal	
1	CASEOP	
2	GND	

B.17 Front Panel LAN LED Connector (LANLED1)

Table B.18: LAN LED Connector (LANLED1)			
Pin	Signal	Pin	Signal
1	LAN1_ACT#	2	LAN2_ACT#
3	+V3.3_AUX	4	+V3.3_AUX
5	LAN3_ACT#	6	LAN4_ACT#
7	+V3.3_AUX	8	+V3.3_AUX
9	NC	10	x

B.18 SATA SGPIO Connector (SGPIO1)

Table B.19: SATA SGPIO Connector (SGPIO1)		
Pin	Signal	
1	SCLOCK_PCH	
2	х	
3	SLOAD_PCH	
4	SDATAOUT0_PCH	
5	SDATAOUT1_PCH	

B.19 LPC Connector (LPC1)

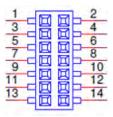

Table B.20: LPC Connector (LPC1)			
Pin	Signal	Pin	Signal
1	CLK_24M_LPCCN	2	LPC_AD1
3	PLTRST_LPC	4	LPC_AD0
5	LPC_FRAME	6	+3.3V
7	LPC_AD3	8	GND
9	LPC_AD2	10	SMB_SCL_LPC
11	SERIRQ_PCH	12	SMB_SDA_LPC
13	+5V_AUX	14	+5V

B.20 Clear CMOS Connector (JCMOS1, JME1)

Table B.21: Clear CMOS Connector (JCMOS1, JME1)			
	JCMOS1 JME1		
Pin	Signal	Signal	
1	NC	NC	
2	RTC_RST_PCH	HDA_SDOUT_PCH	
3	GND	+3.3V_AUX	

B.21 PMBUS Connector (PMBUS1)

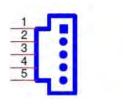

Table B.22: PMBUS Connector (PMBUS1)			
Pin	Signal		
1	SMB_SCL_PM		
2	SMB_SDA_PM		
3	SMB_ALT_PM		
4	GND		
5	+3.3V		

B.22 GPIO Connector (GPIO1)

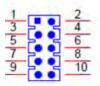

Table B.23: GPIO Connector (GPIO1)				
Pin	Signal	Pin	Signal	
1	EC_GPIO0	2	EC_GPIO4	
3	EC_GPIO1	4	EC_GPIO5	
5	EC_GPIO2	6	EC_GPIO6	
7	EC_GPIO3	8	EC_GPIO7	
9	VCC_GPIO	10	GND
