Product:

KW Multiprog; PAC; Adam-5510KW; Adam-5550KW

Abstract:

How to Increase the Editing Area of a Programming Space

Description:

I have developed a program using KW Multiprog but the program is too big that current worksheet space is not enough.

Solution:

Right click your first or current worksheet of program and select “Insert “and “Code Worksheet”. It will show a dialog for input the new worksheet name. You can also select “Insert” or “Append” to place the new worksheet in different place depending on executing order. Then it will generate a new worksheet under the same program. If there is more than one worksheet, the executing order will follow one by one as shown in the POU/Program Tree.
