

Product Change Notice

This statement is to address concerns regarding Advantech's Ethernet I/O module, ADAM-6060-CE.

To continue the supply of ADAM-6060, ADAM-6060-BE is revised to ADAM-6060-CE because of the phase-out of its key component. The CPU and its peripheral circuit are changed to accomplish the same design goal. The revision of ADAM-6060 can cover all the functions the existing model provides, while maintaining the same ping assignment and control command sets. Please be informed that ADAM-6060-CE will be released to replace ADAM-6060-BE, beginning September, 2013.

Comparison Table

The functions of ADAM-6060-CE will cover ADAM-6060-BE's. In the hardware point of view, the operations of the two modules are the same. However in the software point of view, ADAM-6060-CE provides more features for customers.

You can refer

Features	ADAM-6060-BE	ADAM-6060-CE
DHCP	Not supported	Supported
Peer-to-peer	Supported	Supported
GCL (Graphic Condition Logic)	Supported	Supported
Group Configuration	Not supported	Supported
User-defined Modbus Address	Not supported	Supported

Firmware Change

The firmware for ADAM-6060-CE is different from ADAM-6060-BE's because they're using different CPU. The *ADAM.Net Utility* will protect users from downloading the wrong firmware. Please make sure you're uploading the right firmware for your ADAM-6060 module.

Model Name	Firmware Version
ADAM-6060-BE	Lower than V5.00
ADAM-6060-CE	V5.00 or higher
